

Steps for Java Script It!

1. Choose Application

Choose which application (a java script effect such as Animation) you want to add to a webpage from either the **Start Menu** or the **Applications** menu.

2. Application Steps

Once the application you chose is open, click on the **Steps** button or press the **F2** key to open Steps for that application. The Steps for each application will guide you through each application step by step with easy to understand instructions and examples. You can also use the **Quick Steps** (found in the toolbar for each application) to give you an abbreviated step by step guide through each application.
