

Quick Steps

Besides Steps, each application in Java Script It! also contains another step by step guide called Quick Steps. Quick Steps provides a brief guide through each application and is designed to be used by those who are already comfortable with the application's interface but just need a little guidance.

It is recommended that you use Steps first before moving on to Quick Steps. Quick Steps and Steps are related in topic but do not always follow the same instruction pattern (example: step 4 in Quick Steps might not be the same as step 4 for Steps).

Quick Steps can be accessed by clicking on the **Start Quick Steps** button located in the toolbar of each application.
