

Unarj

paste.tiff ↵

This version of unarj has been modified for the NeXT. However, the modifications are generic, and someone willing to expend a small amount of effort could port it to another Unix platform.

The executable included with this distribution was compiled under NeXTSTEP 3.0, and I am thus distributing the file as unarj.compressed. If someone you know is still running NeXTSTEP 2.x, I would appreciate it if you could recompile it and see if it works.

I ported this program since so many MS-DOS users are starting to use the ARJ compression method.

If you have any problems, please feel free to send me e-mail (NeXT mail preferred).
