

Miniaturize Window command

3PointRule.eps ↗

menupath1.eps ↗menupath2.eps ↗menupath3.eps ↗

Changes the window you're working in into a miniwindow icon at the bottom of the screen.

Miniaturizing a window doesn't change anything inside it. You can double-click the miniwindow when you want to display the full window.

The Miniaturize Window command does the same thing as the miniaturize button in the window's title bar.
