Debug Mode

UUCon can poll in a debug mode. This uses uucico rather that uupoll.   uucico is rather slow to quit so don't panic when UUCon's progress wheel keeps spinning... For debugging to work one of two methods can be used. UUCon can be run from the root account, ***suid root will not work it will break the App!!***.   The second method requires a special installation. ***Warning, Debug Polling displays login information!***   The special installation is as follows.

```
1)
chgrp daemon /etc/uucp/L.sys
chmod g+r /etc/uucp/L.sys

2)
chgrp daemon UUCon.app/UUCon
chmod g+s UUCon.app/UUCon
```

The Makefile has a installSpecial rule that will do this for you, but it

must be made as root.
