

Graph3D is a program I was working on about a year ago as an experiment for a larger program. Although I never had the opportunity to finish it or remove all the bugs, it was still a very useful learning experience.

Graph3D draws a three-dimensional mathematical function within a bounding volume. The user is able to rotate this function freely as well as change the scale and the degree of perspective. Currently, there is no option to change the function displayed.

This program comes with no copyrights and no guarantees. I hope you find it useful. If you have any comments, questions or suggestions, feel free to contact me.
