

Colors and Sizes

The color and size of each element is stored in the file called MolViewer.dat. The file format is :

<symbol>_<radius>_<R>_<G>_

If <R>,<G>, aren't present a neutral grey will be used. The <radius> is mandatory. _ represents whitespace.

Please note that the colors and sizes used in the "Quick" mode are hardcoded and cannot be changed this way.

If you modify any of these values interactively in the program, the modified file is saved in ~/Library/MolViewer.dat
