

Introduction

536262_PixelRule.tiff ↗

MailEnclosure was designed to allow me to ship files around the net. I don't always deal with NEXTSTEP users and in particular I have friends using MIME and MSMail. The goal of this app is not to replace Mail.app but to allow the user to handle other types of mail enclosures.

Currently the app only generates other enclosure types but future revs should parse them as well (see *Future Developement ;future.rtf*;;¬).
