

(Poste) Services

Poste allows you to address an envelope from any application on the NeXT that supports Text with Service access. In practical application, Poste might be used to generate an envelope which corresponds to a business letter written in a word processor.

For example...

Steve Jobs
NeXT Computer, Inc.
900 Chesapeake Drive
Redwood City, CA 94063

Dear Steve,

Love the computer. Black is **soooo** hip. I'll take a truckload!
Lets do lunch...

Ciao,
Joe User

... might weakly resemble your business letters. With Poste installed correctly, select Steve's address and use "Envelope" from the "Service" menu. Poste will automatically

launch and format an envelope ready to be printed. (To use this example, first copy it into your word processor).
