In addition EnhanceMail contains a number of miscellaneous options. This section of the manual documents them and gives instructions on how to set them.

Options.tiff ↗

Keep Replies with Originals

When this option is enabled, replies are not saved to the Outgoing mailbox as is the default, but instead are saved in the same mailbox as the message you replied to. This is convenient as it allows thematically related messages to be kept together rather than being spread over several mailboxes, or having to sort them manually. Messages which are not replies will still be stored in the Outgoing mailbox.

Automatically spell check messages

This option causes EnhanceMail to spell check your message when you hit deliver. If it can't find any spelling error, the message is delivered, otherwise the spelling panel is popped up and you have a chance to correct your errors. Alternate clicking deliver overrides the spell check (if the option is enabled) or forces a spell check (if the option is disabled). An minor side-effect is that Alternate clicking will also cause the message to be archived, even if archiving is disabled. That is unintended but unfortunately we are out of modifiers for clicking the Deliver button !

Automatically compact mailboxes

Setting this option causes Mail compact a mailbox every time it is closed. This will save many a keystroke to the experienced user and many a megabyte to the sysadmin of inexperienced users. The only disadvantage is that once a mailbox is compacted, deleted messages can't any longer be undeleted.

Open Mailboxes Window on Launch

This option will open the Mailboxes Window every time Mail is launched, saving the user a click.

Open Addresses Window on Launch

Ditto for the Addresses Window.

Flag Replies

With this flag you can make EnhanceMail flag messages you have replied to. This does not necessarily mean that a reply was actually sent. For example, if you discard the reply before sending it, or the system crashes, the original will still be flagged. (Note: Due to Mail limitations the messages status, like flagged or deleted, is not preserved when a message is transferred to another mailbox.)
