X-Face

The code to interpret the X-Face header was largely copied from the compface library (the README for that distribution;compface-README.rtf;compace-README;¬).   This library was suggested to me by Christian Limpach <Christian.Limpach@nice.ch> who also provided an example of its usage.

Regular Expression

The regular expression code for this package was originally written by Henry Spencer at the University of Toronto.   It came to my attention through the good offices of Darcy Brockbank <samurai@amber.hasc.ca> and Robert Nicholson

<robert@steffi.accessone.com>.   You can find the copyright statement here;regexp-COPYRIGHT.rtf;regexp-COPYRIGHT;¬ and the README file here;regexp-README.rtf;regexp-README;¬.

HTTP
Izumi Ohzawa <izumi@pinoko.berkeley.edu> demonstrated to me how simple HTTP retrieval could be and so is indirectly responsible for the HTTP support.

Translation
All German translations in EnhanceMail are the work of Gerald Erdmann <gerald@kurt.in-berlin.de>, while Yanagisawa Takeshi <yanagisw@gaea.aa.ap.titech.ac.jp> is responsible both for the Japanese translations and the Japanese quotation code.

Ultimately Guilty Party

This I imagine must be the perpetrator of this bundle and its documentation, to wit, myself.
