v1.1   5/15/95

· fixed bug with "Really Delete?" panel
· fixed drag/drop bug where files wouldn't be added unless there
   was an insertion point
· made adding an attachment file dirty the to-do list
· restored missing IB connection between the SplitView and
   ToDoController (this corrects some resize problems)
· fixed bug where Command-n (or new item) would forget edits in
   progress
· added service to add items from other programs (e.g., Mail)

· selections provided as service (e.g., Mail Selection)
· added timestamp (Command-T) operation
· single-click no longer selects the "Subject" line (this is to allow services to export the selected item).   It now requires a double-click to select the "Subject" line.
