

Known bugs and problems

126476_PixelRule.tiff ↗

The following is a list of problems that I know of as of July 1993. Note that I have no immediate plans to fix any of these. I'm just listing them so we all know that they are known problems!

393402_paste.tiff ↗ The CRLF stuff isn't integrated as tightly as it should be (e.g. it ignores the preference settings for Mac files, but there is no hint of that given...)

81908_paste.tiff ↗ One could argue that Convert TEXT should be able to automatically convert either the Mac CR or DOS CRLF to the NeXT LF automatically, without the user needing to set a preference or choose a different menu item. While this is true, I really did want to keep the paths separate, because I didn't want to make assumptions about how files were coming in.
