

Version History

532645_PixelRule.tiff ↵

version 0.11 (Garance) - May 11th, 1995:

140883_TaskArrowSm.tiff ↵ Fixed a minor bug in CD database which caused mCD to never match a CD which had either six or seven songs.

444103_TaskArrowSm.tiff ↵ Compiled under NS-3.3, for m68k, i386, HPPA, and SPARC. Note that it has not been tested at all on HPPA or SPARC hardware, and it wouldn't be surprising if there are some problems on those platforms.

562623_PixelRule.tiff ↵

version 0.10 (Garance) - Mar 19th, 1995:

862172_TaskArrowSm.tiff ↵ Fixed a problem that would cause mCD to ignore the last track of a music CD on some CD-ROM drives.

101210_TaskArrowSm.tiff ↵ Minor fix to handle oddity on NS/Intel the first time one tries to load a CD after a system reboot.

237543_TaskArrowSm.tiff ↵ Split the CD_DBase into a separate subproject, and greatly increased the number of CD's it knows about (now at 579). The "database system" itself is still pretty lame, but at least it's broken down into subroutines.

373960_TaskArrowSm.tiff ↪ Add a menu option to copy out the current entry as Objective C code, useful for putting into the (lame) CD_DBase routines.

509607_TaskArrowSm.tiff ↪ Made the version-numbers consistent, since I actually did release this a few months ago (without updating help or the info panel).

647459_PixelRule.tiff ↪

version 0.07 (Garance) - Jun 27th, 1994:

738435_TaskArrowSm.tiff ↪ All cd_commands (in scsi_cd.subproject) have been redone to address the byte-endian differences of NS/Intel hardware. Also did this for **some** (but not all) routines in scsi_commands.

636722_TaskArrowSm.tiff ↪ Window positions can now be saved, and are saved based on the size of the monitor of the main screen on your machine. Thus, you can have separate window size&locations set for monitors with different sizes (wrt ^apixel dimensions^o).

831304_TaskArrowSm.tiff ↪ Lots more work to do before releasing this anywhere!

224804_PixelRule.tiff ↪

version 0.05 (Garance) - Feb 27th, 1994:

804976_TaskArrowSm.tiff ↪ Initial version which has help hooked
up.
950476_TaskArrowSm.tiff ↪ Lots more work to do before releasing
this anywhere!

90792_PixelRule.tiff ↪
