

Distribution and usage rights

266379_PixelRule.tiff ↯

639016_TaskArrowSm.tiff ↯ This application is provided with source code. I'd prefer that anyone who distributes the application also distribute the source code. I think this is especially important given that this program must run as `userid` root. People should have the source code to any program which they need to run as root, and which is coming from an ^aunknown^o source. In this context, people really should consider me a ^aunknown^o source.

901925_TaskArrowSm.tiff ↯ Anyone who is putting together a CD-ROM of software for the NeXTSTEP/OpenStep communities is welcome to include this application and all its source code on the CD-ROM. I'd appreciate being notified in advance, in case I have a newer version ready, but that's not a requirement.

663334_TaskArrowSm.tiff ↯ Anyone is welcome to include the source code of this program in their own programs. If you do so, the responsibility for debugging the source that you use in **your** program is **your** responsibility. I'd appreciate being notified of any bugs that you fix, so I can include those fixes in the official version.

609111_TaskArrowSm.tiff ↯ While you're free to use this source,

please don't call your program `mCD`, or anything particularly close to `mCD`. I would also expect that anyone using parts of this source code for their own program has done so to produce something more than just a clone of this. I'd like to see something noticeably different.
