

Help command

Line.tiff ↵

Displays the Help panel with an introduction to *DefaultsSystem*.

The *DefaultsSystem* help files are just added to those of **Preferences.app**: both reside in different directories and have separate index files. Searching for some text in the Help panel or using click-for-help causes a lookup in the index file corresponding to the last read help text.

If you've last read one of the *DefaultsSystem* help files the *DefaultsSystem* index will be used, otherwise the one of

Preferences.app or some other module.

PixelRule1.tiff ↪

- Selecting *DefaultsSystem* automatically loads the Intro file to switch to the modules index.
