

"Daemon Owners" preference

Line.tiff ↵

Shows a List of all owners with daemon status.

PixelRule1.tiff ↵

- The Test panel is the only way for adding daemon status to an owner; use the Test command of the *DefaultsSystem* menu.
- Black entries are user defined and can be removed, gray ones are predefined and not removable.

removeDaemonStatus;↵• If you click on **Remove Daemon Status** while pressing <Alternate> the entry is removed only when there is no corresponding owner in the defaults database; otherwise the error beep sounds.

- No multiple selection possible.
- A double click on an entry (even if it's gray) selects it in the main browser.
