

# Wish list of things to do in future versions

266379\_PixelRule.tiff ↪

First off, note that I've been averaging about a day's worth of work on this every two months, so don't be too surprised if new versions are rather slow in coming...

TaskArrowSm.tiff ↪ Write **considerably** more help information.

826610\_TaskArrowSm.tiff ↪ Reorganize cd-command processing into classes and subclasses, where there would be a class for each kind of CD-ROM drive that mCD supports.

594464\_TaskArrowSm.tiff ↪ Hook up a real database capability using the index kit. Some of the work for this has been started, but it's still in the early stages and is in a separate application.

969557\_TaskArrowSm.tiff ↪ Also include a command-line version, for those who don't care about a fancy point-and-click front-end for playing CD's.

796946\_TaskArrowSm.tiff ↪ More debugging under NS/Intel.  
Debug other platforms.

927542\_TaskArrowSm.tiff ↪ See if I can hook in play3401-type

processing, and similar processing for the Apple CD300.

954721\_TaskArrowSm.tiff ↪ Select CD-ROM drive automatically.

220924\_TaskArrowSm.tiff ↪ Split out parts that need root access into a separate program.

1700\_TaskArrowSm.tiff ↪ Implement some of the suggestions sent to me by various users.

**Note that I make absolutely no guarantees that I'll ever have the time to do any of the above!**
