

Testing

126476_PixelRule.tif ↵

This has been tested with a number of PICT files I have accumulated over the years, plus a large number of simple PICT files I have created to test out conversion of each PICT opcode. A few files have been provided by others to demonstrate particular problems. These, too, are used to test the app.

The filter services have been tested using the NEXTSTEP Preview application as the receiver of the eps data. The PICT data that has come from two sources: (1) PICT data on the pasteboard from MacDraw II under ARDI's Executor product, and (2) PICT files in the NeXT filesystem opened via the standard Open dialog.
