Keyboard hardware preferences can be set for specified keyboard so that when KeyFont application is launched/used the specified keyboard is used. Currently, the KeyFont application only supports NeXT and NeXT adb keyboards. To change the keyboard specifications: Click the "Preferences..." option from the main menu of the KeyFont application. Select the right keyboard from the Preferences panel, then press the Set button or simply press the return key. Changes can be cancelled by clicking on the Cancel button. You may save the new setting to your default database, by clicking the Save button, so that the next time KeyFont application is launched the saved keyboard type will be used.
