

The Basics

FontLister allows you to preview samples of all of the fonts you have installed on your system

This app is based on the Idea written by Bovine Software. Here is the old FontListers help and documentation

FontLister is NOT free - If you use it send a registration fee of \$5 or whatever you think its worth. Registering your copy will qualify you for free updates, and at the same time help the Milwaukee NeXT User's Group spread the word.

Send your check to:

Bovine Software
224B West Vine Street
Milwaukee, Wisconsin 53212

For answers to your questions:
bovisoft@parsec.mixcom.com

Welcome to **FontLister**. If you are familiar to **FontLister** on the Macintosh, congratulations on switching to NeXT!
I kept on getting zillions of postcards regarding a new version of the software (461 last time I counted), that I decided to make the new version run on my favorite computer.

As always **FontLister** is guiltware(tm): send me what you think it is worth. It is more of a private tool that I made for my wife, but no doubt others will find it useful. Whatever you send will fund the Milwaukee NeXT User's Group.

Eventually (soon), **FontLister** will provide some useful info regarding fonts and best yet, it will provide you with a really nifty service that will make you happy.

INSTRUCTIONS:

To display a sample swatch for a particular font, choose Font Swatch from the Swatches menu (the default when you start-up the software). Use the Font Panel to change to a different font.

To display a list of all fonts on your system with their name on their own typeface, choose Font List from the Swatch menu.

Everything else should be self explanatory.
Have fun! and remember to send in your guiltware fee!.
