

Drag & Drop

Line.tiff ↗

There are two kinds of files that can be dragged onto the module window:

Default files

For the two supported formats **.defaults** and **.dset** the contents of the file are loaded. The open filter has the values set in the "Open and Save Options" preference.

Owner files

All files with one of the extensions defined in the "Owner Types" preference. *DefaultsSystem* tries to select a corresponding owner in the main browser.

Hint: you can't drop more than one file at a time on the module window.
