

NetInfoManager

Manage Domain Hierarchy panel

SA4padPointRule2.eps ↵

Use this panel to choose how you want to organize the hierarchy of a new domain. You can use this panel to create a new root domain in the domain hierarchy, create a new child domain in an existing domain, create a new clone server for an existing domain, or turn an existing domain into a child domain of a specified parent domain.

You open this panel with the Manage Hierarchy command in the Domain menu.
