# Compendium Deluxe #1 Audio Rippers Menu

### 1.1 Audio Rippers

Filename	Comands	Size	Description
cmrip11+.lha	VX	2K	CHIPMANIA RIPPER V1.1+ - This is a specially coded module ripper for use on the ChipMania file chip-music mag.
er223af+.lha	VX	92K	Exotic Ripper 2.23af - I have tried to include all the new (and old!) musicformats available. A lot of updates are promised. Today, with more than 48 music-formats this ripper still holds the record and is considered the best!
promRip.lha	VX	3K	Promizer Ripper 1.0 by Fazz/Alpha Flight - This rips Promizer modules from memory. If you read the docs for the Promizer module optimizer then you will have noticed the author says these modules are 99% rip protected. I have managed the 1%! This ripper is only for modules created with Promizer 1.8a
pwrip135.lha	VX	47K	PowerRipper 1.35 by Joakim Ögren - Finds NoiseTracker and ProTracker modules in memory and saves them to disk. It will search through all memory places available. It starts with chipmem(s) and continues with fastmem(s).
sg11a.lha	VX	9K	Speedy Gonzales V1.1a by Howard of LSD - This is a music-ripper, unlike most others. Nearly all other music-rippers are competing of most formats, while SG doesn't. SG's power is within its speed and small size. When I compared SG to Noisehunter 2.01 , SG used 20% of the time (4.7 sec against 22.3)!
war21.lha	VX	21K	W.A.R 2.1 by J.Walker of Damien - This is a module ripper with other features, the docs are poor but its easy to use.
