1.1 Trackers

Filename	Comands	Size	Description
hearttracker.lha	VX	172K	Hearttracker V2.33 - This is Protracker with KS3.0+ compatability and bug fixes for Melon Dezn.
jcbtrack.lha	VX	96K	JCB Tracker 3.15 - Another Protracker clone, it claims to be better than the 'real' Protracker 3.15, more speed plus 32 bit options.
maxtr10.lha	VX	118K	MaxTracker V1.0 by Sylvain MARCHAND - Another Protracker clone, which works fine on all Amigas. It allows you to PLAY MODULES EVEN IN FAST-Memory, when XDMA Mode is on (Setup 2 screen), and DMAWait can be done without any processor loop, so samples play even with a 68040/25 or 33Mhz.
pt12eSer.lha	VX	92K	Protracker 1.2e (DUAL AMIGA VER) BUGFIXED by Raul Sobon - This is the same old protracker with the benefit of doing real 8 channel modules. You hook up two amigas via a null modem cable and then when you play/record on one amiga it instantly (with maximum 20ms delay apart) does the same on the other one, giving a true 8 channel sound.
pt315.lha	VX	110K	Protracker 3.15 - Now fixed for better KS3 support. This is a upgrade of ProTracker 1.3/2.0B, and is not based on PT's after the original release of PT1.3 by Amiga Freelancers, therefore find features implemented in Pre PT1.3 releases that this version. However we hope that you'll find this release better than the
symph.lha	VX	619K	Demo version Symphonie, a new kind of music tracker and a new module format.
