Compendium Deluxe #1 Audio Players Menu

1.1 Audio Players

Filename	Comands	Size	Description
clx-tp30.lha	VX	23K	TrackerPacker v3.0 by Crazy Crack of Complex A very fast replayer/packer for Protracker modules.
des-tr2.lha	VX	204K	DES-Tracker Library System 2.00 by Darren Schebek - Now you can enjoy the great sound of tracker music on your Amiga with a minimum of fuss. DES-Tracker has been designed for low-memory platforms. The library is only 25K, the included jukebox program that uses the library is only 3.5K, and the library only requires 2K in memory.
DMODP32a.lha	VX	214K	D.A.S.Module Player 3.2a by Pauli Porkka - A high end moduleplayer with some awesome capabilities and features. 14-Bit players, support for S3M, MTM and FTM.
ift-mp2x.lha	VX	46K	Infect present Module Protector 2.x by Atle Bjustveit. This makes modules totally un- ripable (until a new ripper is released!). KS2+ required.
linmod2.lha	VX	29K	Lind Mod Version 2.00 - This was written because I was sick and tired of trying to load a module in the background while I was working. I know there are other module players available but most of them had no decent hide facility, some are too big and litter up your workbench, some when you hide them disappear forever etc.
orex.lha	VX	92K	O-REXX 1.0 by Aaron Weiss - This a front-end to the program OmniPlay 1.231. You must have that program to use this one. More specifically, you must have that program for O-REXX to do anything useful.
ProMizer20.lha	VX	9K	ProMizer2 fast protracker player. KS2 only
prprun2.lha	VX	47K	Prorunner 2.0 by Cosmos of Sanity. This claims to be the ultimate protracker replayer. It makes the module smaller,

ps3m0025.lha VX 18K PS3M 2.5 by Guru of Sahara Surfers - This
the replay routine is very fast and it
claims to be unrippable (although Exotic
ripper can find them!).
plays PC S3M-modules, as featured in all
newer Future Crew demos etc. As they use
1-32 channels and 8 octaves, a normal
Amiga is not capable to play them - Until
now!
