Compendium Deluxe #1 Backup Utilities Menu

1.1 Backup Utilities

```
Filename          ComandsSizeDescription
aback406.lha        VX    80K ABackup 4.03 by Denis Gounelle - This
                              ABackup is a backup program. It may be
                              used both to make a backup of your hard
                              disk or to archive files, handles non-
                              AmigaDOS partitions, has a full Intuition
                              interface, and can use XPK library.
barc11b.lha         VX    20K BackARC V1.1 ßETA by Stephen Bradley -
                              This was created for the same reason
                              printer  spools were created: to alleviate
                              some  extranious activities for people who
                              are  extremely impatient. BackARC is a
                              program  designed to sit in the background
                              and unpack files.
dred2310.lha        VX    84K DRED v1.110 by Bob Rye and Marcus
                              Mroczkowski - DRED stands for Disk
                              REDucer, it's a utility that can save you
                              a lot of  disks. It does this is by making
                              a list of files that you want to put onto
                              a number of floppy disks, and working out
                              what files  should go where in order to
                              minimize the  number of disks needed.
fill-1_1.lha        VX    21K Fill Version 1.1 by Barry Wills - This is
                              a Smart Multi-file Mover/Copier, it Moves/
                              copies files from the specified directory
                              to a specified destination. Optimizes
                              space on destination by using a "best-fit"
                              algorithm.  Capable of filling every byte
                              on a floppy without splitting files.  Can
                              accommodate MS-DOS 720k floppies as
                              destination.
mrback15.lha        VX   312K MRBackup 1.15 by Mark Richard Rinfret -
                              This is a hard disk backup program.  It
                              provides a wide range of services to
                              support Amiga file management and
                              backup/restore of files to/from hard disk.
stow07b.lha         VX    20K Stow 0.7ß by Leonard D Atkinson II - This
                              looks at files in a directory and then
```

attempts to copy them to floppies while
wasting as little space as possible. It
doesn't pack them perfectly, but it does a
pretty good job most of the time.
