## 1.1 Animation Viewing Utilities

Filename	Comands	Size	Description
aflck201.lha	VX	39K	AmiFlick 2.01 by Garrick Meeker This is an FLI animation player for the Amiga! Now you can play those PC .FLI anims on your machine, however they do play somewhat slower.
ashow.lha	VX	87K	AlienShow V2.02 by Aliengroup - This is a Pic/Animshower like ViewTek, but Alienshow is much faster and better. I wrote this, because I have the nose full from all other showers. These showers have all together an intuition-screen and they don't centre smaller Pics and Brushes. Other Picshowers can't show little Brushes in the right form
bigani36.lha	VX	11K	BigAnim v3.6 by Christer Sundin - This is an animation player, and it's so called because it's able to display animations directly from disk that are too large to be loaded into memory directly.
flip_141.lha	VX	17K	FliP 1.41 by Dominik Tonn. This is a player for FLI and FLC animation files, common for IBM PCs. It is not as fast as a player for the PC and it needs AGA Chipset with KS3, Fastmem and CPU performance.
gl2p1.lha	VX	57K	GL animation player 2.1 by John Bickers - GL is an Amiga GL file player. It implements a subset of the GRASP commands on Amiga GL files created with GLIB. These are based on MS-DOS GL files, but with an intermediate conversion stage to improve the playback speed and conversion quality.
vtekv20.lha	VX	263K	Viewtek 2.0 by Thomas Krehbiel - This is

an picture and animation viewer utility  
designed for Workbench 2.0 and up.
