## Chapter 1

# Compendium Deluxe #1 Screen Enhancement Menu

### 1.1 Screen Enhancement

Filename	Comands	Size	Description
256col.lha	VX	2K	Colours - This simple screen hack makes nice 256 colour copper fades on your Workbench screen, requires AGA.
blankaga.lha	VX	352K	Garshneblanker 37.11 - This is an attempt to provide the Amiga community with a future compatible, easily expandable screen blanker. I have provided a platform for others to write custom screen blanker modules when the whim strikes.
bltzblk1.lha	VX	319K	Blitzblank 1.0 by Thomas Boerke - A screenblanker with great features, written in Blitz Basic.
defpubsc.lha	VX	33K	Defpubscreen 3.00 by Matt Francis - This is a Commodity and has a GUI. DefPubScreen is a small utility which automatically makes the front-most screen the default public screen (but only if the screen is actually public). Now it is also possible to exclude certain screens from those that DefPubScreen will make default.
mst_pn11.lha	VX	29K	PAL^NTSC SWITCH V1.10 - AMONWARE - This is just a complement to the Switches found on several different bootblocks. There you can find a toggle option between PAL (European Mode) and NTSC (US Mode). This function does only toggle the Hz number inside the boot- screen, after you have exit the bootblock you are switched into the PAL
pprefs10.lha	VX	29K	PPrefs 1.0 by Olaf Gschweng - This is a screenmode promotion utility which allows you to promote every available screenmode of your system (including those that normally don't appear in screenmode requesters, e.g. HAM or EHB modes) with another mode.

promo18.lha	VX	47K THE PROMOTOR 1.8 BY KURT HAENEN - People using the AGA chipset and kickstart 3.0 will probably have notice the Mode Promotion toggle in the IControl preferences. This switch should allow a sort of software de-interlacing by changing the screenmode for certain screens.
screen24.lha	VX	90K ScreenFool 2.4U (11.9.93) by Chris Lawrence - This is a public screen manager utility for KS2 and above.
sm131.lha	VX	50K ScreenManager by Bernhard Möllemann 1.31 This is a small CLI utility used to open, close or modify public screens and retrieve information about them. Screens can be opened with user-selectable colors and DrawInfo's (they determine which colour is used for highlighting).
yass_v16.lha	VX	13K Yass (Yet Another Screen Selector) 1.6 by Albert Schweizer. this is a screen selector.
