### 1.1 Arexx Support Archives

Filename	Comands	Size	Description
arexgl0c.lha	VX	211K	Arexx Guide 1.0 by Robin Evans - This is a collection of Arexx scripts and useful info to help Arexx programming.
ARexxSuper.lha	VX	23K	ARexxSupervisor 1.0, by Frédéric DELACROIX. ARexxSupervisor provides a means of mouse-controlling the data that is sent to a valid ARexx port. Be careful however, it is easy to make destructive actions or provoke deadlocks or gurus.
larpl1a.lha	VX	12K	Little ARexx Proggy (LARP) 1.1 by Aki Laukkanen - The name of the program's arexx-port (which is a application port - not global) is LARP.01 or .02 and so on. It depends on if you have other LARPs running. The only command is PUTS "<text here>". Could do lot's of other neat commands like LOAD "<filename>" and so on.
rms05a.lha	VX	78K	RMS 0.5a by Ray Norrish - A utility for optimizing, compresing and encrypting ARexx scripts. It is designed to be very easy to use via a GUI interface and will reduce the size of your ARexx scripts while optimizing it and password-encrypting it.
rxser502.lha	VX	11K	rexxserdev.library 5.02 by Joseph M. Stivaletta - Provides an easy to use interface between ARexx programs and any Amiga serial device. The serial device will be opened as shared so take care when accessing that serial device from more than one application. All I/O requests to the serial device are synchronous.
