

IMPORTANT:

READ ALL OF THE FOLLOWING INSTRUCTIONS BEFORE STARTING THE HELL DEMO!

To Play the Hell Demo :

- 1) At the DOS prompt, type "D:" then press ENTER (That is if your CD-ROM drive letter is D).
- 2) Then type "CD HELL" then press ENTER.
- 3) Next, type
"HELL /Pc:\tmp /M<music driver> /S<sound driver>,<port>,<irq>,<dma>"

Whereas text within <brackets> mean:

<music driver> can be "nom.md2", "adlib.md2" or "roland.md2" depending on what music card you have installed in your system. "roland.md2" is the driver for Roland cards, "adlib.md2" is for Sound Blaster, Proaudio Spectrum or Adlib compatible cards. "nom.md2" is the driver for systems with out music cards. If you enter the wrong driver the demo will lock-up your system.

<sound driver> can be "sb.sd", "pas.sd", "sm2.sd" or "nos.sd" depending on what sound card you have installed in your system. "sb.sd" is for Sound Blaster cards (SB16, Pro etc.), "pas.sd" is the driver for ProAudio Spectrum cards, "sm2.sd" is the driver for Sound Master II cards, if you do not have a sound card use "nos.sd". If you enter the wrong driver the demo will not work.

<port> is the I/O port number that is assigned to your sound card. If your sound cards port number is "220" you will enter "220" after the sound driver name.

<irq> is the IRQ number used by the sound card. If your sound card's IRQ number is "7" you will enter "7" after the port number.

<dma> is the DMA number used by the sound card. If you sound card's DMA number is "1" you will enter "1" after the IRQ number.

IF ANY OF THESE NUMBERS ARE WRONG THE DEMO MAY NOT WORK CORRECTLY.

Example command lines:

- A) If you have a Sound Blaster card with a port number of 220, IRQ of 7 and a DMA number of 1 you will type:

```
HELL /Pc:\tmp /Madlib.md2 /Ssb.sd,220,7,1
```

You will notice that there are NO SPACES between "/M" and "adlib.md2", "/S" and "sb.sd", and after any commas. If you put spaces where none are allowed, the demo will not run.

- B) If you have a Roland music card and a ProAudio Spectrum card with a port number of 384, IRQ of 12 and DMA of 3 you will type:

HELL /Pc:\tmp /Mroland.md2 /Spas.sd,384,12,3
