Problems with CD-ROM drivers :

1) Sometimes, the program can't find CD-ROM device driver.
   The device driver is installed in CONFIG.SYS.

   With other pseudo-disk drivers installed, such as SMARTDRV.SYS, a conflict
   may appear.
   To prevent this problem, the program looks for the letters "CD" in the
   installed device name.

   Automatic CD installation normally generates a correct line in CONFIG.SYS.

   In case of problem, edit your CONFIG.SYS file to have a line such as
    DEVICE=XXXXXXXX.SYS /D:MSCD0001
   Consult your CD-ROM manual for the exact syntax of this line.

2) Sound mixing on SoundBlaster-Pro
   If you want CD sound on the standard output on your SoundBlaster, insert
   this line in your AUTOEXEC.BAT.
      SBP-SET /CD:15
