

WinASCII

Version 0.02 BETA 09-01-1991

Copyright(c)1991 DSI

Written by Daniel Otis

What it does

This program simply collects any readable information from any file and displays it with Notepad (which came with Windows 3.0). This is good for finding extra information about a program, looking for possible trojan or virus messages, and snooping around in general.

How it works

I think that this is self explanatory but I will include documentation on this if anyone feels it is necessary.

NOTE ON MINIMUM LINE LENGTH

The minimum line length work almost like a signal to noise filter. It is set too low, there will be so much garbage that you will have a hard time finding anything of value. If it is set too high you will get little or no information at all.

The default is that any line less than four characters in length will be discarded. This can be changed through the OPTIONS menu.

How to contact me

Since this is a BETA release, I would really like to here from you! Tell me what you like or don't like. Tell me what you would like to see in the future. Tell me if you think I am wasting my time (I will listen to everybody). I am especially interested in hearing about problems! Let's get those bugs squashed!

or send me a message via the FIDONET Windows Echo user: Daniel Otis

Shareware

This is a beta release so I don't expect any money for it. However, if you want to see it improved and more stuff by myself, send in the cash <g> \$5 is what I would pay for a utility.

Warranty

There is absolutely no warranty of any kind. Use at your own risk.
