

Installing the Printer Software

About the Installer

Use the Installer to install the printer software onto your hard disk. The Installer copies the printer drivers (Serial and AppleTalk®) and background printing files to the correct locations in your System Folder. If the installer finds a file that has the same name as the one it is installing, it replaces that file with the most current version.

When the Installer installs the printer software on your hard disk, it also increases the Finder memory allocation to 400K. If the Finder is locked, it would prevent the Installer from increasing the Finder memory. (See your Macintosh System documentation for more detailed information on the Finder).

The driver installer provides two options: Easy Install and Customize.

Using the Easy Install

Use the Easy Install option to install all of the printer software in the correct locations on your hard disk. To use the Easy option, follow these steps:

1. Make sure your computer is turned on.
2. Restart your computer while holding down the Shift key.
This turns off any system extensions that might cause conflicts during the installation process.
3. Insert the DW 600 Series 7.2.4 disk and double-click the Installer icon.
4. Click the Continue button.
5. Read the licensing agreement and click "Accept" to continue or "Cancel" to quit the installation.
6. Make sure that the hard disk named on the Installer screen is the one on which you want to install the printer software. If the wrong hard disk is named, click the Switch Disk button until the correct hard disk name appears.
7. Click the Install button.
8. The Installer will display a warning message if other applications are running. Click the Continue button to continue the installation. When the installation process is complete, the Installer displays a message indicating the

installation was successful.

9. Click the Restart button to restart your computer.

Refer to your printer's User Guide for more information on using the Easy Install.

Using the Customize Option

Use the Customize option to install the combination of printer driver files and background printing resources you want to install. You can use this process to install just the AppleTalk version or just the Serial version of the printer driver. To use the Customize option, follow these steps:

1. Make sure your computer is turned on.
2. Restart your computer while holding down the Shift key.
This turns off any system extensions that might cause conflicts during the installation process.
3. Insert the DW 600 Series 7.2.4 disk and double-click the Installer icon.
4.
Click the Continue button.
5.
Read the licensing agreement and click "Accept" to continue or "Cancel" to quit the installation.
6. Make sure that the hard disk named on the Installer screen is the one on which you want to install the printer software. If the wrong hard disk is named, click the Switch Disk button until the correct hard disk name appears.
7. Click on the pop-down menu in the upper left corner and select "Custom Install."
8. Click in the checkbox of each of the items you wish to install.
9. Click the Install button to install the selected items.
10. The Installer will display a warning message if other applications are running. Click the Continue button to continue the installation. When the installation process is complete, the Installer displays a message indicating the installation was successful.
11. Click the Restart button to restart your computer.
