Set speed
Where $[F][x][y]$ means "set speed to $x^{*} 16+y$ ". Though it is nowhere near that simple. Let $z=x^{*} 16+y$. Depending on what values $z$ takes, different units of speed are set, there being two: ticks/division and beats/minute.If $z<=32$, then it means "set ticks/division to $z$ " otherwise it means "set beats/minute to $z$ ". Default values are 6 ticks/division, and 125 beats/minute.
