Changing Lists

ListMeister allows you to maintain multiple lists and switch quickly between them. Your primary list's name is, appropriately, 'List'. Each time you open ListMeister, 'List' is the list that is displayed. All lists are stored in a folder called 'Files' (see the File Maintenance and Management chapter for details).

To create a new list or open an existing one:

- 1) From the main window, click the LIST button or select the 'Change List...' option under the OPTIONS menu.
- 2)
 Enter the name for your list. Keep the name 8 or less
 characters.
- 3)
 Press [Return] or click the CONTINUE button. If
 ListMeister finds a list by that name, it displays the
 items, if not, a new, empty list is started.
