

There are two ways to use The Tilery from the keyboard. This can be a real timesaver, because you don't have to reach for the mouse!

- Hot Keys let you “click” a tile by pressing a key. This works even when The Tilery is not frontmost. See [Setting Hot Keys](#) and [The Hot Key List Window](#) for details.
- Select tiles when The Tilery is frontmost by typing the first few characters of a tile's label. Pressing the RETURN key is the same as clicking the selected tile. See [Selecting Tiles](#) for details.
