

The Preferences menu lets you control several useful options:

- Grid Drags forces tiles to line up neatly when you drag them to different locations. To change the placement and spacing of the grid, see [Tile Placement](#).
- Ignore ⌘Q for Quit removes the keyboard shortcut from the Quit menu item in The Tilery's File menu. This helps prevent quitting from The Tilery accidentally.
- Always Hide Others makes The Tilery automatically hide all applications except the frontmost one and The Tilery itself when you click a tile. This works only when you click a tile. You can get more than one application visible by using Hot Keys or other ways of switching, or by holding down the Shift key when you click a tile. See Hide Application in [Application Tile Menu](#) for a way to automatically hide specific applications when they are not in the foreground.
- Finder to Front at Startup brings the Finder forward automatically when The Tilery is launched at system startup time.
- Defer - See [Deference](#) for details on this feature, which helps keep The Tilery out of your way when you don't need it.
- Tilery Tips opens a small window containing a randomly-selected tip on how to get the most out of The Tilery.
