Chapter 1

GUIDED

1.1 Main

Welcome to Guided!

(see history for changes since last prerelease)

Ok.. This is not really a realease of the program, it's only a very internal version, but because I came to the point in the developing where quite some effort needs to be put into the project, and I have other things to prioritize, I decided to release what I made so far to see if there's any interest out there for me to keep on development.

So if you would like to see a finnished product, encourage me! The program is working, though, I use it myself all the time!

For obvious reasons, the documentation is very bad too at this point, actually it lacks any kind of needful information.

As it is now, the program just keeps your different nodes seperated and keep track of node and guide tags. When I make the real guide editor class, it will also display the guide something like wysiwyg, etc blah blah.

It's still fully ok to send me bugreports, ideas and comments!

/Linus

Guided is a small editor made specially to create AmigaGuide documents. At the moment, there is not much more functionality than a normal texteditor, except that it keeps tracks of some tags for you, but hopefully, if there is any interest, this will improve with further versions.

1.2 Info about the author

Author of Guided is Linus McCabe. Other released projects of the author are

° bdAnim, a simple animationplayer to use as backdrop for the workbench. ° AmiSoxPPC, a PPC compile of AmiSox 3.3.

1.3 Copyright

Guided is copyright © 1999 by Linus McCabe, Sparkle@hehe.com. It's released as freeware, meaning that the program may be copied and used freely as long as it's not altered in any way.

MUI is copyright 1992-97 by Stefan Stuntz TextEditor_mcc is copyright 1997-98 by Allan Odgaard.

1.4 New Node

The program is released 'as is', i.e. the programmer takes no responsibility whatsoever to any damage, loss or data or other disaster the program might cause.

There you got it, right in ya face!

1.5 Usage

Since you dont have any instructions to read, why dont you visit

<http://liten.to/causeofclass>

1.6 Todo

- preferences preferred load/save dir new guide template new node template
- WYSIWYG guide editor class
- node save (export) and insert

1.7 History

V0.1B 94-Mar-99, Second release, still an unfinished product. I just released this, because I know a couple of people out there are using the previous version, and they might want the bugfixes.

Still didnt start the WYSIWYG class.

- The 'changes made' image wouldnt update after a save, FIXED.
- The 'save' function would sometimes forget to add a '/' between the path and the filename.
- The texteditor will use it's fixed font (if one is specified in mui prefs, anyway) This should be make it easier to edit guides, since they are normally displayd with a fixed font.
- Compiled for 68000 and with optimizing on, mostly for fun.

V0.0B First release. Prerelease of a pretty unfinished product.

1.8 Bugs

Remarks might dissappear. Dunno if its worht fixing?

The entire program is a bug at the moment
