1.2 Features

TRANSLATIONS

- 0 - English for French
 - 1 - English for German
 - 2 - English for Italian
-

- 3 - English for Portuguese
- 4 - English for Spanish
- 5 - French for English
- 6 - German for English
- 7 - Italian for English
- 8 - Spanish for English
- 9 - Portuguese for English

ARexx scripts interface integrations

- * Fully integration with Amirc (IRC client)
- * Fully integration with Aweb (WWW Client)
- * Fully integration with IBrowser (WWW Client)
- * Fully integration with Yam (E-Mail Client)
- * Fully integration with Final Writer (Text Editor)
- * Fully integration with WordWorth (Text Editor)

1.3 I wonder how it works...

How it works?

This program allows you to translate texts and documents in many languages using a powerfull server available on the internet, allowing a good and fast translation, using what exists of more modern about translation texts.

The translation will be processed in a ALPHA DIGITAL server of 32 gb ram.

Amiga is only a Translation client.

Remember: Its a online translation, you need it connect on internet for success on translation.

1.4 What it needs?

Requirements

- * An Amiga AGA, ECS or UAE emulator;
- * Workbench 2.0+;
- * 2 Megabytes memory (we recommend more);
- * libs:socket.library

for use Freedom ARexx scripts you need

- * libs:rexstricks.library
- * libs:rexsupport.library

1.5 How to use it?

Usefull examples

Call help

```
FTranslator HELP
```

Translates a sentence (3 - English to Portuguese)

```
FTranslator TEXT 3 "This is a good program..."
```

Translate a text file (9 - Portuguese to English)

```
FTranslator FILE 9 ram:txtfile
```

Translate a text with out display status messages

```
FTranslator TEXT 3 "this program is cool :)" SILENCE
```

AREXX SCRIPTS INTERFACE EXAMPLES

Amirc

- * Just select text on amirc window;
- * Press Amirc button with translation direction;
It's open in the same windows your display with
your translation of your text selected.

AWeb

- * Select text on home page;
- * Go to menu and select translation direction;
It's open one request with your translation.

IBrowser

- * Select text on home page;
- * Go to menu and select translation direction;
It's open multiview window with your translation.

Yam

- * Select text
- * Go to menu and select translation direction;
It's open the request or mail windows with your
translation.

WordWorth

- * Select text
- * Go to menu and select translation option;
- * Select translation direction in request;
It's open other WordWorth window with your
translation.

FinalWriter

- * Select text
- * Go to menu and select translation option;
It's open other FinalWriter window with your
translation.

1.6 To do next time

Future plans

- * Now source is free! If you like to develop new features for this program go a head get the source, report me about your ideas and put your name~together with other developers of this tool.
- * Please, dont remove names of all developers of FTranslator project, just add your name;

1.7 Who am I?

[My Information]

NickName : SuRRouND
E-Mail : surround@iname.com
SuRRouND URL : members.tripod.com/surround_br

[Languages that I develop]

Amiga : SAS C 6.58, Storm C 3.0, Amos Professional 2.0, ARexx;
PC : Borland C++, Turbo Pascal 5.0, Delphi 3, 4 , PPL, Rexx,
Fox Pro 2.6, C++ Builder;
Other : Unix shell, SQL, and more;

[My Amiga's works]

- * More than 20 doors for MAXS BBS;
- * LT-Unix, Operating System Multiuser;
- * Lottery, Lottery System;
- * Sublime, Plug-in for Dopus 4.12, 5+;
- * Freedom Call, Internet's Connections Manager;
- * Freedom Explorer, Explore your calls (module for Freedom Call)
- * Freedom Internet Translator, (module for Freedom Call)
- * Surround.h, Cool include of C, more 60 new commands

[About Freedom Internet Translator]

Project : SuRRouND

                  - First no beta release;

```

1.16 Gratitude

Here they are! These people turned possible this program's development:

* Lugumipe for the first tcpip example. :)

and SAS C authors developers...

Freedom Translator Icons:

not yet...

1.17 Installation

Important:

All Arexx scripts is developed for use FTranslation client on C:, if you dont like copy for C:, modified all calls in arexx scripts.

DOPUS 4

```

* Copy FTranslator para o C:
* Menu Project/Configure
* Option Buttons (chooses an empty button)
* Types FTranslator
  Click New Entry
* Add/AmigaDOS
* Type C:FTranslator FILE 3 {f}
  In Flags it Selects:
  Output to Window
* Set Close Delay for -1
* Now hey only to select TXT and to click in FTranslator. :))

```

DOPUS 5

```

* Copy FTranslator for C:
* Menu Listers/Edit Lister Menu

```

- * Add in the Item
- * Type FTranslator
Add an event to him
