## **Registration of the program**

## What does Calendar Master do?

Calendar Master is designed to replace the use of purchased calendars. These calendars are the ones you buy and hang on your refrigerator or office wall, and then start writing on with appointments, birthdays, and anniversaries. (If you don't use hardcopy calendars, you probably don't need this program). Some of the problems with this method is that each year, you have to re-enter birthdays and anniversaries, repeating appointments have to be repeatedly entered, and, the calendars frequently get cluttered with scribbles and you run out of room.

Calendar Master lets you enter appointments (called events in Calendar Master), both one time and recurring, as well as yearly repeating events such as birthdays and anniversaries, and then print out a calendar with those items printed in the various days. The idea is that you would enter all the birthdays, anniversaries, or appointments you want to remember. You would then print out calendars for the current month as well as the next couple of months. You then use the calendars as you normally would by writing in new appointments on the appropriate days. Periodically, you would fire up Calendar Master, enter the changes to the calendars that you have made by hand, and then print out the next appropriate set of calendars and start over.

As you can tell, this scheme is best suited for a situation where you don't have your computer on all the time or you want to make calendars for someone who doesn't have a computer (and access to a PIM).

Calendar Master is not a PIM. It will not remember addresses, phone numbers, or remind you to pay your bills. It **will** print a calendar from any month along with any other information you enter into it.

## **New Features in Version 1.1**

Several things have been added in Version 1.1 to make Calendar Master easier and more fun to use. The first and most noticeable change is the 3-D look. This doesn't change the functionality much but hopefully you'll agree that it makes the program more pleasing to use.

Status panels have been added to the lower left corner of the Calendar Display. These panels give the current date and time, show printing, saving, and loading status, and give hints, as you move over them with your mouse, on what various buttons and controls will do if you click them.

Calendar Master now gives you control over the fonts used for various event types and other portions of the calendar. See [Font Control](#).

Now you can specify a title for each month that is printed in the top center of the calendar. See [Month Titles](#).

Also new for version 1.1 is a change to the file format for Calendar Master data files. Version 1.0 calendar files will not be read properly by Version 1.1. Registered users of Calendar Master will get a utility that will convert a file from version 1.0 to version 1.1. This is meant as a gentle nudge for those users who have a lot of data in their Calendar Master files to go ahead and [register](#) the program.

## Getting Started

To run the program, use the Windows File Manager to open the directory where Calendar Master was installed. Double click on the program name (CALMAST.EXE).

There are lots of other ways to run Windows programs. Please see your Windows documentation for information on how to create Program Groups and Items.

After the introductory screen you will be presented with the Calendar Display. This is the main window of Calendar Master. From here you can navigate to various months, open the Event Editor, open and save Calendar Master information files, print calendars, and exit the program.

## Viewing a Particular Month

To view a specific month in the Calendar Display, you use the navigation buttons on the left side of the window. The month being displayed is shown above the scroll buttons. The inner scroll buttons change the month (the left button changes to the previous month and the right button changes to the next month). The outer scroll buttons change the year. You can drag the slider left or right to display previous or future months. If you click in the area between the slider and the buttons, you will jump ahead or back by 3 months. The additional buttons below the scroll buttons allow you to quickly display the current month (based on the system clock) or hop directly to a specific month in the currently displayed year.

You will note that, depending on the way the dates fall, some months will have their last few days wrap up to the top line of the calendar. In other words, Calendar Master only displays 5 rows (weeks) for any month so for those months that have days that span 6 rows, the sixth row is combined with the first row. This was done to provide as much room as possible in the day cells for printed and written events.

If you have event information entered into Calendar Master, the number of events (both Normal/General and Anniversary events) for each day will be displayed on the calendar.

## **Entering Events**

Events are added or modified by navigating to the desired month in the [Calendar Display](#) and then clicking on the day that corresponds to the event you want to add or modify. This will bring up the [Event Editor](#) where you can enter the time and text of the event or select an existing event and modify its parameters.

You can enter [Normal](#) events, [General](#) events, [Anniversary](#) events, or [Recurring](#) events.

## Entering/Modifying Normal Events

To enter a Normal event, click in the **Time** box in the Event Editor. Type in the time of the event in either 24 Hr or am/pm format. The following are valid times;

<b><u>This:</u></b>	<b><u>Means This:</u></b>
01:30	1:30 in the morning
3:30 p	3:30 in the afternoon
22:45	10:45 in the evening
8:30 am	8:30 in the morning

Note that you cannot set a duration for an event. Only the start time is allowed. After entering the time, press the TAB key or click in the **Event** box and type in the text of the event. You can make the event a Recurring or Anniversary event by clicking the corresponding option button. Note that the time will be ignored in an Anniversary event. If you need the time field, make a Normal Recurring event.

When finished entering the event text, press Return, click the **Add** button, or press Alt + a. The event will be added to the **Event list** at the top of the display.

To delete an existing event, select the event from the **Event list**. The event information will be displayed in the Edit area. Note that the **Add** button will change to **Update** and the **Delete** button will become enabled. Click the **Delete** button or press Alt + d.

To modify an existing event, select the event from the **Event list**. The event information will be displayed in the Edit area. You can change the time, text, or type of the event in the same manner as is done for adding events. When finished modifying the event, press Return, click the **Update** button, or press Alt + u.

To change the day displayed in the **Event Editor**, click the scroll buttons or drag the slider at the top of the display. These buttons change the display to either the next day (the right button) or the previous day (the left button).

When you are finished entering/modifying events, click the **Close** button at the top right of the display or press Alt + c.

## Entering/Modifying General Events

To enter a General event, click in the **Event** box in the Event Editor and type in the text of the event. Don't enter a time in the **Time** box. You can make the event a Recurring or Anniversary event by clicking the corresponding option button.

When finished entering the event text, press Return, click the **Add** button, or press Alt + a. The event will be added to the **Event list** at the top of the display.

To delete an existing event, select the event from the **Event list**. The event information will be displayed in the Edit area. Note that the **Add** button will change to **Update** and the **Delete** button will become enabled. Click the **Delete** button or press Alt + d.

To modify an existing event, select the event from the **Event list**. The event information will be displayed in the Edit area. You can change the time, text, or type of the event in the same manner as done for adding events. When finished modifying the event, press Return, click the **Update** button, or press Alt + u.

To change the day displayed in the **Event Editor**, click the scroll buttons or drag the slider at the top of the display. These buttons change the display to either the next day (the right button) or the previous day (the left button).

When you are finished entering/modifying events, click the **Close** button at the top right of the display or press Alt + c.

## Entering/Modifying Anniversary Events

To enter an Anniversary event, click in the **Event** box in the Event Editor and type in the text of the event. The **Time** box is ignored for an Anniversary Event. You can make the event a Recurring or Normal event by clicking the corresponding option button.

When finished entering the event text, click the Anniversary option button or press Alt + v. Then press Return, click the **Add** button, or press Alt + a. The event will be added to the Event list at the top of the display. Anniversary events are displayed in the Event list with an "A" preceding the text of the event.

To delete an existing event, select the event from the **Event list**. The event information will be displayed in the Edit area. Note that the **Add** button will change to **Update** and the **Delete** button will become enabled. Click the **Delete** button or press Alt + d.

To modify an existing event, select the event from the **Event list**. The event information will be displayed in the Edit area. You can change the time, text, or type of the event in the same manner as done for adding events. When finished modifying the event, press Return, click the **Update** button, or press Alt + u.

To change the day displayed in the **Event Editor**, click the scroll buttons or drag the slider at the top of the display. These buttons change the display to either the next day (the right button) or the previous day (the left button).

When you are finished entering/modifying events, click the **Close** button at the top right of the display or press Alt + c.

## Entering/Modifying Recurring Events

To enter a Normal Recurring event, click in the **Time** box in the Event Editor. Type in the time of the event in either 24 Hr or am/pm format. The following are valid times;

<b><u>This:</u></b>	<b><u>Means This:</u></b>
01:30	1:30 in the morning
3:30 p	3:30 in the afternoon
22:45	10:45 in the evening
8:30 am	8:30 in the morning

Note that you cannot set a duration for an event. Only the start time is allowed. If you want to enter a General Recurring event, don't enter a time in the **Time** box. Note; you can't enter a Recurring Anniversary event.

Press the TAB key or click in the **Event** box and type in the text of the event.

When finished entering the event text, click the **Recurring...** option button or press Alt + r. This will display the Recurring Event dialog. This dialog allows you to specify the parameters of the recurring event. When finished specifying the information in the Recurring Event dialog, press Return, click the **Add** button, or press Alt + a. The event will be added to the Event list at the top of the display. Recurring events are displayed in the Event list with an "R" preceding the text of the event.

To delete an existing event, select the event from the Event list. The event information will be displayed in the Edit area. Note that the **Add** button will change to **Update** and the **Delete** button will become enabled. Click the **Delete** button or press Alt + d. The Delete Recurring Event dialog will be displayed. This will allow you to delete various subsets of the recurring event.

To modify an existing event, select the event from the **Event list**. The event Information will be displayed in the Edit area. You can change the time, text, or type of the event in the same manner as done for adding events. If you change a recurring event to either a Normal/General event or an Anniversary event, a message will be displayed explaining that only the current event (of the recurring series) will be changed. If this is what you want then select OK in the message dialog. If instead, you want to change the entire series of recurring events to one Normal or Anniversary event, then select Cancel in the message dialog and then select the **Delete** button in the **Event Editor** and delete 'All but this event' and then re-select the event and change the type.

When finished modifying the event, press Return, click the **Update** button, or press Alt + r.

To change the day displayed in the **Event Editor**, click the scroll buttons or drag the slider at the top of the display. These buttons change the display to either the next day (the right button) or the previous day (the left button).

When you are finished entering/modifying events, click the **Close** button at the top right of the display.

## Overriding the Default Font

The effects applied to the events printed on the calendar are controlled by the Font Control dialog. These effects can be modified however by the check boxes in the Font Effects portion of the Event Editor. The check boxes are used to **add** the corresponding effect to the event being edited.

Note that you can't undo an effect specified by the default font. In other words, if the default Anniversary event font (as specified in the Font Control dialog) included bold, you cannot "un-bold" a specific Anniversary event. You can only add font effects to the default effect.

## Font Control

Calendar Master lets you control some aspects of the fonts used for the things printed on the calendar. You can control the font name and effects for Normal/General events, Anniversary events, Month and Year, Month Title, and the days-of-the-week labels. You can also control the font size for events. The fonts that you can use are those that are already on your computer. Calendar Master does not supply any of the fonts its uses. Calendar Master defaults to using "Times New Roman" if no custom fonts are specified.

Font usage is controlled by choosing **Fonts...** from the **Customize** menu in the Calendar Display. This brings up the Font Control dialog. At the top of the dialog is a button bar which controls which calendar object's font is being edited at any one time. As you move the mouse over the buttons, a description appears in the status panel at the bottom of the dialog that explains what the button does. In the middle of the dialog are the controls that let you specify the font name, size, and effects. When you click on a calendar object button, the controls in the center update to reflect the current values. You can change the values and then click on another object button to change that object's values. When you're done, click OK and the changes will be saved. Cancel will cancel all changes made since the dialog was displayed.

As you move the mouse into the font control area, the status panel at the bottom changes to display a sample string with the current font values to give you a preview of what the font looks like. The font size value is not reflected in the status panel since it can be hard to see some fonts at typical sizes used for printed calendars.

The font size control is also disabled for the Month/Year, Title, and days-of-the-week calendar objects. This is to preserve the overall layout of the printed calendar.

This dialog controls the default font effects used for events. These can be overridden on an individual basis in the Event Editor.

This font information is saved with each Calendar Master file and so can be setup differently if you use multiple Calendar Master files.

## Month Titles

Calendar Master lets you specify a Title to be printed at the top center of the Calendar. To enter the Title text, in the Calendar Display, choose **Month Titles...** from the **Customize** menu. A dialog box will appear that will let you enter Title text for each month. Note that if you want the same text for all months you can just enter the text in the box for January and then click Replicate January. The text in the January box will be copied to all other months. Click the Clear All button to erase all the title text boxes. When you have finished entering the title text, click OK to save the information.

Note that the length of the Title that will fit between the month and the year on a printed calendar is dependant on the Title font used and the text of the font itself (if a proportional font is used). The Title will show up on the Calendar Display but really can't be used for a guide since the Calendar Display and the printed calendar are not at the same scale. You basically just have to try it and see what works.

A note on the Title shown on the Calendar Display. Most likely, the entire Title won't all fit between the month and the year and will be clipped on the display. If you want to see the whole title, you must click on the title and then use the arrow keys or Home and End keys on the keyboard to scroll the Title right and left. You can delete or add to the Title too but it won't have any affect on the Title and the next time you display the month, the Title will be back to what it was when set in the Month Titles dialog.

## Printing Calendars

To print a calendar, use the navigation buttons to display the desired month (see [Viewing a Particular Month](#)). If you have saved information into a Calendar Master file and you haven't loaded it yet, you may want to load the file at this time.

Ensure that your printer is on and then either click the print button  on the [Toolbar](#) or choose **Print** from the **File** menu. Note, you can only print one month at a time. After you have selected print, a percentage complete bar will appear to show printing progress.

Event text will wrap to two lines when the calendar is printed. Event text longer than two lines is clipped at the edge of the day cell on the printed calendar. This limits the printable length of event text to around 50 characters depending on whether it is a [Normal](#) or [General/Anniversary](#) event.

Anniversary events are printed in **bold** one line below any other events.

The printer setup can be changed by selecting **Print Setup...** from the **File** menu. This will bring up the Setup dialog box for the default Windows printer. Note that this changes the printer setup for all applications that use the default Windows printer. This also means that if other applications change the default printer setup, those changes will also affect how Calendar Master prints calendars.

## Saving Calendar Master Information

Once you have entered events into Calendar Master, you should save the information into a Calendar Master file. These files can then be read back into Calendar Master for updating. You can have multiple Calendar Master files which you can use for different purposes but only one Calendar Master file can be loaded at any one time. Calendar Master files should have an extension of .CMS.

To save your event information into a file, click the save button  on the Toolbar or select **Save** from the **File** menu. If you have not previously read in information from a Calendar Master file, you will be prompted for the directory and filename in which to store the event information. If you have previously opened a Calendar Master file, then the current information will be saved back into that file. If you want to change the name of the file the information is to be saved into, select **Save As...** from the **File** menu.

Calendar Master files are plain ASCII files which you can look at and edit in your favorite text editor.

The format of Calendar Master files has changed from version 1.0 to version 1.1. The program will not read version 1.0 files. Registered users can obtain a utility to convert version 1.0 files to version 1.1 format.

## Opening a Calendar Master File

If you have saved event information into a Calendar Master file, you can retrieve that information and add to it or update it. You can have multiple Calendar Master files which you can use for different purposes but only one Calendar Master file can be loaded at any one time. Calendar Master files should have an extension of .CMS.

To open a Calendar Master file, click the open button  on the Toolbar or choose **Open** from the **File** menu. The File Open dialog box will appear where you can select the Calendar Master file you wish to open. Opening a file will erase any information that is currently in Calendar Master. You should save any event information you wish to keep before opening a new Calendar Master file.

You can also specify a file to open when you start the program. If you specify the name of a Calendar Master file following the name of the program CALMAST.EXE when you start the program, the named Calendar Master file will be loaded. The easiest way to do this is to setup a program item for Calendar Master in the Windows Program Manager. See your Windows documentation for more detailed information.

Calendar Master files are plain ASCII files which you can look at and edit in your favorite text editor.

The format of Calendar Master files has changed from version 1.0 to version 1.1. The program will not read version 1.0 files. Registered users can obtain a utility to convert version 1.0 files to version 1.1 format.

## Deleting Event Information

You can delete event information in two ways. The first way is to navigate to the appropriate month, open the Event Editor for the appropriate day, select the event and click **Delete**. If the event is a Recurring event, the Delete Recurring Event dialog is displayed which allows you to select a subset of the Recurring events to delete.

This method is fine for deleting small numbers of events but can be cumbersome for deleting large numbers of events.

The way to delete large numbers of events is to select **Delete Events...** from the **Edit** menu. This is useful for purging the Calendar Master file of old events (which will help performance). Selecting **Delete Events...** from the **Edit** menu will bring up the Delete Events dialog. Here, you can choose to delete all events before a certain date, all events after a certain date, or all events. Note that this does not affect Anniversary events. Select the desired delete method, the date if applicable, and then choose OK.

Of course, you must save the Calendar Master file for the changes to be permanent.

## Exiting the Program

To exit the program, click on the Exit door  on the Toolbar at the top of the Calendar Display. You can also select **Exit** from the **File** menu. If you have not saved any changes you have made to the information currently in Calendar Master, you will be asked whether you want to save the information. If you choose Yes, the information will be saved in the currently open file or, if a file is not open, you will be prompted for a directory and filename.

## **Registration of the Program**

Calendar Master is a shareware program. This means that you can use it for a period of sixty days in order to evaluate it's usefulness to you. After sixty days, you must either register the program or delete it from your system.

Registration is accomplished by filling out the [Registration Form](#) and sending it along with \$10.00 US., to the address shown below.

Tom Hudgins  
14722 Fawnglen Circle  
Chino Hills CA, 91709

Upon registration, you will be granted a license to use the program and will be put on the mailing list for notification of upgrades and enhancements.

You can also contact me through CompuServe at 73523,3314  
(Internet: [73523.3314@compuserve.com](mailto:73523.3314@compuserve.com))

## Registration Form

*Print this form by clicking Print from the File menu.*

Please register my copy of Calendar Master. Enclosed is \$10.00 U.S.

## Font Effects

Font Effects in Calendar Master means the **bold**, *italic*, underline, and ~~strikethrough~~ affects added to the font.

## Event Types

**Normal Events** are events which have both event text and a time.

**General Events** are events which don't have a time associated with them. For example, "Payday", "Pay Bills", or "School Pictures".

**Anniversary Events** are events that happen every year on the same date. This would include birthdays, anniversaries, and some holidays. Anniversary Events do not have a time associated with them.

**Recurring Events** are events which happen at a certain pattern like "every 3 days for 2 weeks" or "every month for 2 years". Both **Normal** and **General** Events can be recurring.

A **PIM** is a **P**ersonal **I**nformation **M**anager. This is a class of program which is used to keep track of information such as Names and Addresses, Phone Numbers, Appointments, and other miscellaneous information.

## The Toolbar

The Toolbar is the row of buttons at the top of the Calendar Display. These buttons are used as shortcuts for frequently used operations.

This button is used to open an existing Calendar Master file. The corresponding menu command is **Open** in the **File** menu. All event information in Calendar Master will be cleared before opening the new file but you will be prompted to save any changes you have made before this happens.

This button is used to save the current Calendar Master information in the current file. The corresponding menu command is **Save** in the **File** menu. If there is no file currently open, you will be prompted for the name of the file to save into.

This button is used to print the currently displayed Calendar Month. The corresponding menu command is **Print** in the **File** menu.

This button is used to exit Calendar Master. You will be prompted to save any changes you have made to the file before the program exits. The corresponding menu command is **Exit** in the **File** menu.

This button is used to display Calendar Master Help. The corresponding menu command is **Contents...** in the **Help** menu. Remember, Help is available at all times by pressing **F1**.

## Delete Events Dialog

The Delete Events Dialog is displayed by choosing **Delete Events...** from the **Edit** menu. This dialog is used to delete ranges of Normal/General event information. This does not delete Anniversary events. Anniversary events can only be deleted using the Event Editor. The **Event Editor** allows you to delete either one event at a time or subsets of Recurring events.

The Delete Events Dialog allows you to delete all events, all events before a given date, or all events after a given date. If you choose to delete events before or after a date, the delete is not inclusive of the events on the given date (before or after, not on).

Note; you can also read the Calendar Master file into an ASCII editor (like Notepad) and use it to delete events from the file.

## Recurring Event Dialog

The Recurring Event Dialog is displayed when you click on the **Recurring...** option button in the Event Editor. This dialog allows you to set the parameters of a Recurring event.

There are two basic parameters of a Recurring event. The first one is the frequency; "Every 3 Days", "Every 2 Months", or "Every 1 Year". This parameter is set on the left side of the dialog. Select the **Every** box and enter the frequency then click on the drop down button on the units list box immediately to the right and select the units.

The other parameter of a Recurring event is the duration; "Every 3 Days for 2 Weeks", or "Every 2 Months until 10/13/95". This parameter is set on the right side of the dialog. As hinted in the example, the duration can be either some number of units or an end date. To set an end date, click the **Until** option button and then enter the end date in the **Date** box. The end date means "up to and including this date". Note that an occurrence of the Recurring event might not land on the end date. Thus, if you specify "Every 2 Weeks until 10/13/95" and 10/13/95 is tomorrow, you will only get one event.

To make the duration some number of units, click the **For** option button, enter the number of units in the For box and then select the units from the drop down list to the right.

When you have specified the parameters, click the **OK** button. If you change your mind and don't want to make a Recurring event, click **Cancel**. The Recurring event doesn't actually get entered into the event list until you select **Add** or **Update** in the **Event Editor**.

## Event Editor

The **Event Editor** is a dialog box that is used to enter and modify event information. At the top of the display is the Day selector. This shows the day being edited and allows you to change to the next day (right arrow) or the previous day(left arrow). You can also drag the slider right or left to advance or go back up to 31 days. If you click in the area of the scroll bar between the slider, the day will advance or go back by one week. Also at the top is the **Close** button which closes the **Event Editor**.

Next is the **Event List**. This is a scrollable list which shows the events for the current day. You can select (click on) events in the **Event List** to modify or delete them.

At the bottom is the Event Edit area. This is where you enter or modify event information. Enter the time of the event in the **Time** box and the text of the event in the **Event** box. You select the type of the event by clicking on the appropriate option button. You can override the default font effects by checking the desired boxes in the Font Effects area. The buttons at the bottom allow you to **Add** a new event, **Update** a modified event, **Delete** an event, or **Cancel** adding a new event or modifications to an existing event.

## Calendar Display

The **Calendar Display** is the main display window for Calendar Master. This window shows the calendar of the currently selected month (and the number of events on each day), allows you to change the selected month, and allows you to load and save Calendar Master files, and exit the program.

To view a specific month in the Calendar Display, you use the navigation buttons on the left side of the window. The month being displayed is shown between the scroll buttons. The inner scroll buttons change the month (the left button changes to the previous month and the right button changes to the next month). The outer scroll buttons change the year. You can drag the slider left or right to display previous or future months. If you click in the area between the slider and the buttons, you will jump ahead or back by 3 months. The additional buttons below the scroll buttons allow you to quickly display the current month (based on the system clock) or hop directly to a specific month in the currently displayed year.

Event totals for each day will be displayed on the calendar.

To open the **Event Editor**, click on the desired day on the calendar.

The **Toolbar** or the menu bar can be used to print, load and save files, and exit the program.

## **Delete Recurring Event Dialog**

This dialog box allows you to specify the subset of events of the selected Recurring event to delete. You can choose to delete

**Just the current event - no other events in the recurring series are changed.**

**All the events - all the events that match the selected event**

**All previous events - all the events that match the selected event that occur before the selected day.**

**All future events - all the events that match the selected event that occur after the selected day.**

Select the option desired and then click OK to carry out the delete. Cancel aborts the delete.
