3x3 Labeler 1.2
Copyright 1993 by
TANSTAAFL Software

3x3 Labeler is an easy-to-use method of producing labels for 3 1/2"
disks. The label can contain a list of the files or directories
on the disk, or multi-line text, as well as a banner (title) and
edge text.

3x3 Labeler is distributed as a .ZIP file, containing 3x3.EXE,
3x3.HLP, 3x3.WRI, THREED.VBX, MHGTXT.VBX and this file. Place the
.VBX files into your Windows\system directory, and the other files
can go into any directory.

3x3 Labeler requires the Visual Basic 3.0 runtime, named VBRUN300.DLL.
This can be obtained from most BBS's, online services, Microsoft, and
from TANSTAAFL Software with program registration.

NOTE TO USERS OF PREVIOUS VERSIONS:

Please delete the 3x3.INI file from your Windows directory. 3x3 1.2
will create a new .INI file when you save the defaults.
