\*\*\* JSP \*\*\*  
PO Box 333  
Roseland, NJ 07068

Make check or money order out to Joseph S. Pagano. To contact the author, send Electronic Mail to 72010,1163 (Compuserve) or send regular mail to the address listed above.

#### Installation Requirements

-----  
AutoDial requires Microsoft Windows v3.1, a 1200 bps or higher Hayes or Hayes compatible modem, and roughly 500K of free disk space.

You must provide the VBRUN200.DLL file and copy this to your \WINDOWS\SYSTEM directory prior to running the AutoDial installation program. VBRUN200.DLL can be obtained from Compuserve as VBRUN2.ZIP in ZNT:TIPS Lib 10.

#### Installation Notes, Download Version ADIAL.ZIP.

-----  
AutoDial requires VBRUN200.DLL. If you do not already have a copy of this file you can get one from Compuserve. VBRUN200.DLL can be obtained from Compuserve as VBRUN2.ZIP in the ZNT:TIPS Lib 10.

- \* UNZIP all files to a temporary directory on your hard disk.
- \* Copy VBRUN200.DLL to the your WINDOWS\SYSTEM directory.
- \* From the Windows Program Manager, select File, Run.
- \* Type the path to the AutoDial setup program. For example, if you copied the AutoDial files to C:\TEMP, type C:\TEMP\SETUP after selecting File, Run from the Windows Program Manager.

\*\*\* Note: The AutoDial installation program copies the following files to your WINDOWS\SYSTEM directory:

MSCOMM.VBX  
THREED.VBX

If you reinstall Windows to a new drive or directory, or if you migrate AutoDial to a new PC be sure to copy these files to the new \WINDOWS\SYSTEM sub directory or reinstall AutoDial.

## Program Notes

-----

To use help, select any of the HELP buttons or simply press the F1 key.

Be sure that your modem is turned on prior to running AutoDial so that AutoDial can properly initialize your modem. The modem is initialized at time of startup. If initialization fails, you will be prompted with an error when you start AutoDial. If this happens, check your modem connection and or the AutoDial COM port setting, quit AutoDial and restart the program. Failure to follow this procedure can result in your PC "hanging".

AutoDial can be configured to use either COM1 or COM2. AutoDial initializes your modem with the speaker turned off. This is to prevent feedback when dialing a telephone number with your phone off hook.

If your phone system requires a phone number prefix to access numbers outside of your building, be sure to configure AutoDial properly. To configure a phone prefix number select the Config button, highlight the Phone Prefix field and enter the desired number.

To Dial a phone number, highlight the desired entry and select "Dial Phone". You will be prompted to continue. Pick up your phone and select "OK". You will hear the phone begin to dial. AutoDial will dial the number, wait several seconds, and then send a hangup command to the modem. As long as you have the phone off hook the call will continue to be processed.

To Dial a beeper number, highlight the desired entry and select "Dial Beeper". When prompted, select OK. AutoDial will proceed with the call. You will be notified of the following conditions: BUSY, NO DIALTONE, NO ANSWER, ERROR.

A maximum of 500 entries is allowed.

\*\*\* Note: Entry data is stored in the file PHONE.DAT.  
Configuration data is stored in AUTODIAL.INI.
