OVERVIEW

Introduction

Windows Lotto is one of the most advanced lottery programs available today. The program has numerous analysis tools for Handicapping lottery numbers. A Quick Pick function is included that automatically picks the best numbers to play, based on an analysis of previously drawn numbers.

Number Systems (Wheels) are used to generate tickets for the numbers that are picked. Windows Lotto checks the numbers played each week against the numbers drawn and gives you a summary of winning tickets. A search option is provided that allows you to search the drawing database for winning combinations of numbers.

Analysis Tools

Windows Lotto provides the following analysis tools for handicapping lottery numbers:

- Number Statistics Chart
- Trend Chart
- Skip and Hit Chart
- Sequence Chart
- Repeating Pairs Chart
- Repeating Triples Chart
- Drawing Summary

Quick Pick

Windows Lotto performs a statistical analysis of the numbers drawn in previous games. Numbers are grouped into several categories. These categories include Hot Numbers, Cold Numbers, Due Numbers, Last Draw Numbers, Odd Numbers, Even Numbers, Sum of Numbers, 1 to 12 Numbers, 13 to 31 Numbers, and 32 and Up Numbers. Averages and percentages are determined for each of the categories.

The Quick Pick option automatically picks your numbers based on the data collected for the above categories. The numbers you play are then consistent with the statistics for previous drawings. If 50% of the numbers that are picked each week are Hot numbers, it is to your advantage if 50% of the numbers you wheel are Hot numbers.

In Quick Pick, if you wheel 10 numbers, the program automatically determines how many of those 10 numbers should be in the 1 to 12 range, 13 to 31 range, and 32 and up range. The number of numbers picked from the Hot, Cold, Due and Last Draw categories is based on previous drawing statistics. The numbers picked are saved to a Quick Pick file and used in one or more of the 24 wheeling systems included with the program.

Wheeling Systems

Why use wheeling systems? It can honestly be said that "Wheeling" reduces the odds against you!

First, simply by playing more numbers (more than the standard six), in a group, you have a better chance of having the officially drawn numbers match your wheeled numbers. Second, by playing more tickets, you increase the odds mathematically of holding a cash paying ticket(s).

Probably the greatest single benefit of "Wheeling" is the payoff maximization that is inherent in a wheeling system. Because you are playing several combinations of the same numbers, when a few of these numbers are selected, they appear on your tickets in a "shotgun" fashion throughout the tickets you play.

In many wheeling systems, if only four numbers appear in the larger group of numbers you wheel, multiple prizes will appear throughout your tickets.

All successful professional gamblers use wheeling systems. The wheeling system concept provides a methodology for playing numbers and provides payoff maximization through multiple ticket wins. It is a matter of personal choice as to whether or not you want to play the lottery. However, if you do play the lottery, wheeling systems represent the most intelligent way to play and win!

Windows Lotto has 24 wheeling systems for Pick-5 and Pick-6 lotto games, and 20 wheeling systems for Pick-7 games. These systems can be edited or replaced with other systems.

Basic Operation

Each week you will use Windows Lotto to update your data base file, check your tickets for winning games, pick the best numbers to play, and finally to wheel your numbers.

The following topics give you general instructions on how to perform these tasks in Windows Lotto. Please refer to the Reference section for more detailed instructions.

Updating Your Data Base File

To effectively use Windows Lotto, you must have a data base file with a minimum of 21 previous draws. To create your own data base file, contact your lottery commission and ask them to send you a list of the previous draws.

Once you have your list, choose the Create New Drawing File command from the Files menu to create your drawing file. Once the file has been created, use the Open Drawing File command in the Files menu to open the file. Finally, use the Edit command in the Drawings menu to add the previous draws from the list.

Since adding several hundred draws can be a tedious task, you may want to order your data base file(s) from Data Solutions. Files are available for all U.S. and international lotteries that pick 5, 6 or 7 numbers. Registered users receive one up-to-date data base file at no extra charge.

Once you have the entered all the previous drawings, keeping the data base up to date is relatively easy. Each time there is a new draw, use the Edit command in the Drawings menu to add the numbers that were drawn.

Checking Your Tickets For Winning Games

Every time you update your data base file with the official numbers from the last draw, you should use the Check For Winning Games command in the Drawings menu.

This option shows you how many of your tickets had 3 or more matching numbers in the last draw. The option uses Game files that are saved when you Play one of the wheeling systems in the Wheels menu.

If you want to search several previous draws for winning combinations of from 3 to 18 numbers, use the Search Drawings command in the Drawings menu.

Picking The Best Numbers To Play

Use the Quick Pick option in the Drawing Summary to pick the best numbers to play, based on the drawing statistics from the Drawing Summary.

Prior to using the Drawing Summary/Quick Pick command, you may want to use some of the other analysis tools in the Statistics menu such as the Trend Chart, Skip and Hit Chart, Sequence Chart, Repeating Pairs Chart and Repeating Triples Chart.

For example, after looking at the Skip and Hit Chart and the Sequence Chart, you may determine that one or more numbers have a very high probability of hitting next. In that case you may want to specify those numbers as Favorite numbers when you use Quick Pick.

The numbers picked in the Quick Pick option should be saved to a Quick Pick file. The file is loaded into the wheeling system(s) that you select.

Wheeling Your Numbers

Choose the Wheels menu command to Play one or more Wheeling systems. After you have selected either a Full or Abbreviated wheeling system, you must select the name of the Quick Pick file that you saved earlier. The numbers in the Quick Pick file are substituted into the system, and the resulting game tickets are displayed on the screen. You should save the results to a Game file, so that you can later check for winning games using the Check For Winning Games command in the Drawings menu. You should also print your game tickets so you can fill out your bet slips.

About This Documentation

This documentation provides information on the operation of Windows Lotto. We assume that you are familiar with the basic operation of your computer. If the computer is new to you or you are unfamiliar with such terms as DOS commands, control keys, clicking, double-clicking, selecting, windows, and menus, you should read the owner's guide for your computer and for Microsoft Windows before using Windows Lotto.

REFERENCE

File Menu

Open Drawing File

You can open a different drawing file by choosing Open Drawing File from the File menu. The shortcut key for this menu command is CTRL O. The Open Drawing File dialog box is displayed.

A list of drawing files in the current directory is displayed in the Files list box. There are three ways to select a file that is displayed.

1. Double click the filename in the Files list box.
2. Highlight the filename in the Files list box and press the ENTER key or click on the OK button.
3. Type the name of the file in the Filename text box and press the ENTER key or click on the OK button.

After the selected file has been opened, the name of the lottery is displayed in the title bar of the main screen. The total draws and date of the last draw is displayed in the status bar at the bottom of the main screen.

Create New Drawing File

You can create a new drawing file by choosing Create New Drawing File from the File menu. The Create New Drawing File dialog box is displayed.

You must enter the following information for the lottery that you are creating the file for:

Lottery Name: Enter the full name of the lottery. The name that you enter here will appear in the title bar of Windows Lotto when the file is opened.

Total Numbers Drawn: Enter the number of numbers that are drawn in this lottery. For example, for the Florida lottery, you would enter 6 for the total numbers drawn. If your lottery has one or more bonus numbers, be sure to include the bonus number(s) in the total.

Highest Number Drawn: Enter the highest number that can be drawn in this lottery. For example, in the Florida lottery, the highest number that can be drawn is the number 49.

Number Of Bonus Numbers: Enter the number of bonus numbers that are drawn in this lottery. Enter a 0 if there are no bonus numbers.

Number Of Matches For Bonus: If the lottery has one or more bonus numbers, you must enter the number of regular number matches required by the lottery before the bonus number is counted. In most lotteries that use bonus numbers, there must be 5 regular number matches before the bonus number counts as a match. One exception is the Pennsylvania Wildcard lottery that accepts 3 matches.

After you have entered all the information in the Create New Drawing File dialog box, click on the OK button. The Save Drawing File As dialog box is displayed.

The first eight letters of the lottery name that you entered in the Create New Drawing File dialog box is the default filename for the new file. The filename must include the extension ".INF". Press the ENTER key or click on the OK button to accept the default filename that is displayed.

You can also type in a different filename in the Filename box. Be sure to include the ".INF" extension. DOS file naming rules must be followed when entering a name.

When you click on the OK button, the information file (INF) is saved and an empty drawing file (DTA) is created with the same name. In the above example, two files are created; ILLINOIS.INF and ILLINOIS.DTA.

You must use the Open Drawing File command from the File menu to open the new file, once it has been created.

Delete Pick or Game File

To delete files created through the Quick Pick or Wheeling options, choose Delete Pick or Game File from the File menu. The Delete Quick Pick or Game File(s) dialog box is displayed.

A list of Quick Pick files (extension PIK) and Game files (extension GAM) contained in the current directory is displayed in the Files list box. Select the file that you want to delete. Another dialog box is displayed that asks you to confirm the deletion.

Click on Yes to delete the file, or No to cancel the deletion. After you have clicked on Yes or No, a dialog box appears asking you if you want to delete another file.

Click on Yes to return to the Delete Quick Pick or Game File(s) dialog box. Click on No when you are finished deleting files.

Exit

Choose the Exit command from the File menu to exit Windows Lotto. The shortcut key for this option is CTRL X. You can also use the Close command in the application Control menu to exit the program.

Drawings Menu

Edit

Choose the Edit command in the Drawings menu to add, change or delete a drawing. You can also view or print drawings that were previously added. The shortcut key for the Edit menu command is CTRL + E. When you choose the command, the Edit Drawings dialog box is displayed.

Add Drawing(s)

Use the Add Drawing option to enter all the numbers from the previous drawings for your lottery, and to keep the data base file updated as new drawings occur.

You should update your lottery database file(s) with the officially drawn numbers before using the Check For Winning Games command in the Drawings menu.

When you choose the Edit command from the Drawings menu, you are by default in the Add Drawing mode. It is not necessary to click on the Add Drawing button.

The drawing number for the next drawing is displayed in the Drawing Number text box. The last five drawings are displayed in a list box at the bottom of the dialog box.

Enter the drawing date in the format MONTH-DAY-YEAR. For example, April 22, 1992 should be entered as 04-22-92. Only enter the numbers; the hyphens are automatically inserted by the program.

Next enter the official numbers that were drawn. If you enter two digits for a number, the insertion bar automatically advances to the next number field. If you enter one digit for a number, you must press the TAB or ENTER key to advance to the next number field.

The program checks for invalid or duplicate dates, and numbers that are out of range. It will not let you save a drawing until both the date and the numbers drawn are correct.

After you have entered all the numbers that were drawn, including Bonus numbers if applicable, the Add Drawing button has the focus. Press the ENTER key or click on the Add Drawing button to save the information.

Another dialog box appears asking you to confirm that you have entered the correct date and numbers.

Press the ENTER key or click on the Yes button to save the drawing. Click on the No button to cancel. When you click on Yes, the new drawing information appears at the bottom of the list box in the Edit Drawings dialog box. Total Draws and Last Draw Date are also updated in the status bar at the bottom of the main screen.

After the drawing is saved, the insertion bar returns to the Drawing Date text box, where you can enter another drawing. If there are no other drawings to enter, click on the OK button to close the Edit Drawings dialog box.

Change Drawing(s)

You can change information for previously entered drawings in the Edit Drawings dialog box. To change drawing information, click on the drawing that you want to change in the list box at the bottom of the dialog box.

You can scroll through the drawings in the list box by using the vertical scroll bar, or by clicking on the Next Drawing or Previous Drawing buttons.

Once you have selected a drawing, the drawing date, drawing number and numbers drawn are displayed in the text boxes at the top of the Edit Drawings dialog box.

Click on the box that you want to change and enter the correct date or numbers. After you have made the change, click on any of the other option buttons in the Edit Drawings dialog box. You are then asked if you want to save these changes.

Click on the Yes button to save the changes, or click on the No button to cancel the changes.

Delete Drawing(s)

You can delete previous drawings in the Edit Drawings dialog box. To delete a drawing, click on the drawing that you want to delete in the list box at the bottom of the dialog box.

You can scroll through the drawings in the list box by using the vertical scroll bar, or by clicking on the Next Drawing or Previous Drawing buttons.

Once you have selected a drawing, the drawing date, drawing number and numbers drawn are displayed in the boxes at the top of the Edit Drawings dialog box.

Click on the Delete Drawing button. You are then asked if it is OK to delete the drawing. Click on the Yes button to delete the drawing, or click on the No button to cancel the deletion.

View Drawing(s)

You can view the previous drawings in the Edit Drawings dialog box. Drawing information is displayed in the list box at the bottom of the dialog box.

You can scroll through the drawings in the list box by using the vertical scroll bar, or by clicking on the Next Drawing or Previous Drawing buttons.

Print Drawing(s)

You can print all drawings or a range of drawings from the Edit Drawings dialog box. To print the drawings, click on the Print button. The Print Options dialog box is displayed.

Enter the number of copies that you want printed in the Copies box. To print all drawings, click on the All option button. To print a range of drawings, click on the Range option button. Enter the From and To drawing number for the range that you want to print.

Click on the OK button to start printing, or click on the Cancel button to cancel printing.

Check For Winning Games

Choose the Check For Winning Games command in the Drawings menu to compare previously saved game tickets to the official numbers that were drawn. The shortcut key for the Check For Winning Games menu command is CTRL + C.

Prior to choosing this command, you must first enter the official numbers that were drawn by using the Edit command in the Drawings menu.

You also must have saved at least one game file (a file with an extension of "GAM"). The Play command in the Wheels menu is used to generate your tickets and to save the game file(s).

When you choose the Check For Winning Games command, the Open Game File dialog box is displayed.

A list of game files in the current directory is displayed in the Files list box. There are three ways to select a file that is displayed.

1. Double click the filename in the Files list box.
2. Highlight the filename in the Files list box, and press the ENTER key or click on the OK button.
3. Type the name of the file in the Filename text box, and press the ENTER key or click on the OK button.

After you have selected a game file, the Check For Winning Games dialog box is displayed.

A numbered list of the tickets in the Game file is displayed in the list box in the Check For Winning Games dialog box. The number of matches is displayed in parenthesis to the right of each ticket. If there are more tickets than are displayed in the list box, you can use the vertical scroll bar to view the other tickets.

The numbers that were drawn in the last drawing are displayed below the tickets list box. The total number of games in the file is displayed to the right of the numbers drawn. A summary of the winning matches for the game file appears below the numbers drawn. The name of the Game file is displayed at the bottom of the dialog box.

To print the winning ticket information, select the Print button. The Print Options dialog box is displayed. Enter the number of copies that you want printed in the Copies box. Click on the OK button to begin printing, or click on Cancel button to cancel printing. When you are finished viewing or printing the tickets, click on the OK button to close the Check For Winning Games dialog box.

Search Drawings

The Search Drawings command in the Drawings menu allows you to enter between 3 and 18 numbers to check against past drawings in the data base file. You can, for example, check the numbers you are about to play to see how they have done in the past. You can also easily check old tickets for winners.

When you select the Search Drawings command, the Search Drawings dialog box is displayed. Enter from 3 to 18 numbers that you want to search for in the data base file. If you enter two digits for a number, the insertion bar will automatically advance to the next number field. If you only enter one number in a text box, you will have to press the ENTER or TAB key to advance to the next field.

After you have entered the numbers to search for, enter the number of drawings to search. The total number of drawings in the data base file is displayed as a default.

Click on the OK button to begin the search. Click on the Cancel button to cancel the search and close the Search Drawings dialog box. When you click on the OK button, the Search Selections Found dialog is displayed.

A list of drawing dates and matching numbers is displayed in a list box in the dialog box. Only drawing dates with three or more matching search numbers are displayed. Use the vertical scroll bar to view the tickets if necessary.

A summary of the winning matches for the data base file appears below the list box. The number of drawings searched is displayed to the right of the summary. The numbers used in the search are displayed at the bottom of the dialog box.

To print the information, select the Print button. The Print Options dialog box is displayed. Enter the number of copies that you want printed in the Copies box. Click on the OK button to begin printing, or click on Cancel button to cancel printing. When you are finished viewing or printing the matching tickets, click on the OK button to close the Search Selections Found dialog box.

Statistics Menu

History

Choose the History command from the Statistics menu to set time back a particular number of draws. History is set to 0 (off) by default. The current History setting is displayed in the status bar at the bottom of the main screen. Once History is set to 1 or more draws, the program performs its calculations up to the draw that History is set to.

History can be used to test number systems on previous draws. For example, if you want to test how many winning matches you would have had with a particular wheeling system 10 draws ago, you would enter 10 for History.

You would then select the Quick Pick option from the Drawing Summary command in the Statistics menu. Quick Pick picks your numbers based on a statistical analysis of draws up to the draw History is set to. The resulting Quick Pick numbers are saved to a file.

Next choose the Play option from the Wheels menu and select the wheeling system that you want to test. Load the Quick Pick file that you just saved. The numbers in the Quick Pick file are substituted into the wheeling system and saved in a game file.

Finally select History from the Statistics menu and set it to 9 draws. Choose the Check For Winning Games command from the Drawings menu to compare the tickets from the wheeling system to the numbers picked in the next drawing.

When you select the History command, the History dialog box is displayed. Enter the number of draws that you want to go back in History. Press the ENTER key or click on the OK button to accept the value entered. The new value is displayed in the status bar at the bottom of the main screen.

The new value for History remains in effect until you load another data base file or exit the program. When a new data base file is opened, the value of History is always set to zero.

Hot Number Cutoff

Choose the Hot Number Cutoff command in the Statistics menu to change the number of last draws for a number to be considered Hot. The current value for the Hot Number Cutoff is displayed in the status bar at the bottom of the main screen.

The default number of draws for a Hot number is 10 draws. Any number drawn at least once in the past 10 draws is considered to be Hot. We recommend that you use the default of 10 draws. We have found that this setting works best for most lotteries. However, you are free to change it and experiment with other settings.

The Hot Number Cutoff also affects how Cold numbers are determined. Using the default cutoff of 10 draws, a Cold number is any number that

has not been drawn in the past 10 draws.

When you select the Hot Number Cutoff command, the Hot Number Cutoff dialog box is displayed. Enter the number of past draws that you want for a number to be considered Hot. Press the ENTER key or click on the OK button to accept the value entered. The new value is displayed in the status bar at the bottom of the main screen.

The new value remains in effect until you open another data base file or exit the program. When a data base file is opened, the value of the Hot Number Cutoff is always reset to 10 draws.

Number Statistics/Trend Chart

Choose the Number Statistics/Trend Chart command from the Statistics menu to view or print number statistics for your lottery. There must be at least one drawing in the data base file to use the command. The shortcut for this menu option is CTRL + N.

The chart shows Number Frequency, Hot Numbers, Last Draw Numbers, Cold Numbers, Due Numbers and Average Number of Draws. Calculations are performed on all draws in the data base up to and including the last draw, unless History is on. If History is on, then calculations are performed on all draws in the data base minus the number of draws History is set to.

The Trend Chart that gives a different perspective of the number statistics. It can be displayed or printed.

When you select the Number Statistics/Trend Chart command, the Calculating Values message box is displayed. Once the calculations are complete, the Number Statistics dialog box is displayed.

All the numbers for the lottery are displayed in the Frequency list box, starting with the numbers that have been drawn the most, down to the numbers that have been drawn the least. Use the vertical scroll bar to view all the numbers.

The number of times the number has been drawn is displayed in parenthesis to the right of each number. The date the number was last drawn is displayed to the right of its frequency. An asterisk next to a number indicates that the number was drawn in the last drawing.

The total number of drawings is displayed above the Frequency list box next to the Frequency title. The Average Draws for all numbers is displayed below the Frequency list box.

All the Hot numbers are displayed in the Hot number list box, starting with the Hot numbers that have been drawn the most in the last 10 draws (assuming that the Hot Number Cutoff is set at the default of 10 draws). Use the vertical scroll bar, if necessary, to view all the Hot numbers.

The number of times the Hot number has been drawn in the past 10 draws is displayed in parenthesis to the right of each number. An asterisk next to a Hot number indicates that the number was drawn in the last

drawing. The total number of Hot numbers is displayed above the Hot number list box next to the Hot number title.

All the Cold numbers are displayed in the Cold numbers list box, starting with the Cold numbers that have not been drawn for the longest time. Use the vertical scroll bar, if necessary, to view all the Cold numbers.

The number of draws since the number was last drawn is displayed in parenthesis to the right of each Cold number. An asterisk next to a Cold number indicates that the number is a Due number. A Due number is a Cold number that is in the upper third of the Number Frequency list box. The total number of Cold numbers is displayed above the Cold number list box next to the Cold number title.

To print the number statistics, click on the Print button in the Number Statistics dialog box. The Print Options dialog box is displayed. Enter the number of copies that you want to print in the Copies box. Click on the OK button to begin printing, or click on the Cancel button to cancel printing. Click on the OK button in the Number Statistics dialog box when you are finished viewing or printing the Number Statistics.

Trend Chart

Click on the Trend Chart button in the Number Statistics dialog box to display the Trend Chart. The chart displays a different color vertical bar for Hot numbers, Last Draw numbers, Cold numbers and Due numbers. A legend for the different colors is displayed in the lower right hand corner of the dialog box.

If you don't have a color monitor, you may want to select the Patterns option button. The chart then displays different black and white patterns for Hot numbers, Last Draw numbers, Cold numbers and Due numbers.

The horizontal axis of the chart represents the numbers in your lottery and is numbered from 1 to the highest number. Below the numbers are the letters H, L, C, and D. These letters indicate whether the number is Hot, Last, Cold or Due.

The vertical axes represents the frequency for each number. The top of the vertical axis represents the most times any number has been drawn.

A horizontal line divides the chart and represents the average draw frequency for all numbers. Numbers that go above this line are above average in frequency. Numbers that fall below the line are below average.

Click on the Print button to print the chart. The chart prints in the patterns mode, even if the Colors option is active. This makes the chart easier to read on a black and white printer.

Skit And Hit Chart

Choose the Skip and Hit Chart command from the Statistics menu to identify trends of numbers when determining which numbers to play in the next drawing. There must be at least two drawings in the data base file to use this command. The shortcut for the Skip and Hit Chart is CTRL H.

When the Skip and Hit Chart command is selected, the Calculating Values message box is displayed. When all the values for each number in your lottery have been calculated, the Skip and Hit Chart is displayed.

The first vertical column on the left represents all the numbers in your lottery. Use the vertical scroll bar to view numbers 11 and up. The 2nd through 25th column (0 to 24) represent the Skip and Hit frequency for each number. Use the horizontal scroll bar to view columns 20 to 24.

If the number 3 in the first column has a 4 under the second column heading labeled "00," the number 3 has immediately reappeared in the very next drawing a total of 4 times.

The third column labeled "01" represents the number of times the number in the first column has appeared, skipped one drawing, and then reappeared again. The fourth column labeled "02" represents the number of times the number in the first column has appeared, skipped two drawings, and then reappeared again, etc.

You should look at the skip performance of individual numbers based on their Skip and Hit frequency when selecting numbers. If a number shows a tendency to appear and then skip 2 or 3 drawings before it reappears, you would want to select that number to play if it last appeared 2 or 3 drawings back.

Click on the Help button in the Skip and Hit Chart dialog box to display a help window on how to read the Skip and Hit Chart. The Help windows gives examples based on actual data in the chart. Click the OK button to clear the Help window.

Click on the Print button in the Skip and Hit Chart dialog box to print the chart. The Print Options dialog box is displayed. Enter the number of copies that you want to print in the Copies box. Click on the OK button to print the chart, or click on the Cancel button to cancel printing.

Click on the OK button in the Skip and Hit Chart dialog box when you have finished viewing or printing the chart.

Sequence Chart

Choose the Sequence Chart command from the Statistics menu to view or print the number sequence chart for the last 25 draws. There must be at least 1 drawing in the data base file to use this command. The shortcut for the Sequence Chart is CTRL S.

This chart is helpful in determining which numbers to play in the next drawing by matching the number sequence against the Skip and Hit chart. You can also determine the short term trends of individual numbers and

their drawing sequence.

When the Sequence Chart command is selected, the Calculating Values message box is displayed. When all the values for each number in your lottery have been calculated, the Sequence Chart is displayed.

The first vertical column on the left represents all the numbers in your lottery. Use the vertical scroll bar to view numbers 11 and up. The 2nd through 25th column (1 to 25) represent the last 25 draws. Use the horizontal scroll bar to view columns 21 to 25.

A "#" in the chart represents a regular number hit. A "BB" represents a bonus number hit (if present). The numbers that intersect the picked numbers (rows), and the last 25 draws (columns), represent the missed draw(s) since the last hit.

If the number 3 appears in row 1 (the number 1) and column 1 (the last draw), that means it has been 3 draws since the number 1 last hit. If a "#" appears in row 2 (the number 2) and column 1 (the last draw), that means that the number 2 was picked in the last draw.

If you see on the Skip and Hit chart that a number has a tendency to skip 3 times before hitting again, and the Sequence chart indicates that it has been 3 draws since the number hit, it would be to your advantage to play that number.

Click on the Help button in the Sequence Chart dialog box to display a help window that explains how to read the Sequence Chart. The Help window gives examples based on actual data in the chart. Click on the OK button to clear the Help window.

Click on the Print button in the Sequence Chart dialog box to print the Chart. The Print Options dialog box is displayed. Enter the number of copies that you want to print in the Copies box. Click on the OK button to print the chart, or click on the Cancel button to cancel printing.

Click on the OK button in the Sequence Chart dialog box when you have finished viewing or printing the chart.

Repeating Sets Chart

Choose the Repeating Sets Chart command from the Statistics menu to view or print repeating pair or triple number sets. There must be at least 10 drawings in the data base file to use this command. The shortcut for the Pairs command is CTRL P. The shortcut for the Triples command is CTRL T.

You can specify to search from 10 drawings to all drawings. After the results have been compiled, you can select the minimum frequency of occurrence of the sets that you want to view or print.

Pairs

When the Pairs command is selected, you are asked to enter the number of past drawings to check for repeating pairs. The number defaults to the total number of drawings in the data base file. However you can enter a number from 10 to the total number of drawings. Press the ENTER key or click on the OK button to accept the value. Click on the Cancel button to cancel the search.

During the data base search, the Calculating Values message box is displayed. After the drawings have been searched, another dialog box is displayed that lists the number of occurrences found.

The number of occurrences are listed from the largest down to the smallest. Use the mouse or keyboard to select the minimum number of occurrences to display or print.

For example, if you select 4 occurrences, only repeating pairs that occur 4 or more times in the number of drawings specified will be displayed or printed.

Once you have selected the number of occurrences, the list box is filled with pairs that are equal to or above the number specified. The repeating pairs are displayed from the highest number of occurrences down to the minimum number of occurrences that you specified. The number in parenthesis to the right of each pair indicates how many occurrences were found. Use the vertical scroll bar to view all the repeating pairs.

Click on the Print button in the Repeating Pairs dialog box to print the repeating pairs. The Print Options dialog box is displayed. Enter the number of copies that you want to print in the Copies box. Click on the OK button to print the repeating pairs, or click on the Cancel button to cancel printing.

Click on the OK button in the Repeating Pairs dialog box when you have finished viewing or printing the pairs.

Triples

When the Triples command is selected, you are asked to enter the number of past drawings to check for repeating triples. The number defaults to the number of drawings in the data base file. However you can enter a number from 10 to the total number of drawings. Press the ENTER key or click on the OK button to accept the value. Click on the Cancel button to cancel the search.

During the data base search, the Calculating Values message box is displayed. After the search is complete, a dialog box is displayed listing the number of occurrences found for repeating triples.

The number of occurrences are listed from the largest number down to the smallest number. Use the mouse or keyboard to select the minimum number of occurrences to display or print.

For example, if you select 4 occurrences, only repeating triples that have occurred 4 or more times will be displayed or printed.

Once you have selected the minimum number of occurrences, the list box is filled with sets of triples that are equal to or above the number of occurrences specified. The repeating triple sets are displayed from the highest number of occurrences down to the minimum number of occurrences specified. A number in parenthesis to the right of each triple set indicates how many occurrences were found. Use the vertical scroll bar to view all the triples.

Click on the Print button in the Repeating Triples dialog box to print the triple sets. The Print Options dialog box is displayed. Enter the number of copies that you want to print in the Copies box. Click on the OK button to print the triples, or click on the Cancel button to cancel printing.

Click on the OK button in the Repeating Triples dialog box when you have finished viewing or printing the triples.

Drawing Summary/Quick Pick

Choose the Drawing Summary/Quick Pick command from the Statistics menu to view or print a statistical analysis of previous drawings. There must be at least 21 drawings in the data base file to use this option. The shortcut for this command is CTRL D.

Each drawing is analyzed to determine how many numbers were in the following categories:

1. 1 to 12 numbers
2. 13 to 31 numbers
3. 32 and up numbers
4. Hot numbers
5. Last Draw numbers
6. Cold numbers
7. Due numbers
8. Odd numbers
9. Even numbers
10. Sum of numbers

After all drawings have been analyzed, averages and percentages are calculated for each of the above categories and displayed at the bottom of the summary.

These calculations are important when picking your numbers. For

example, if the summary shows that Hot numbers make up 50% of the numbers drawn each week, then it is to your advantage if 50% of the numbers you play are Hot numbers.

If you choose the Quick Pick option from the Drawing Summary dialog box, the program automatically picks the best numbers to play, based on the statistics from the Drawing Summary.

For example, if you want to wheel 18 numbers, Quick Pick will determine how many of those 18 numbers should be Hot, Cold, etc., based on the drawing summary results. The resulting 18 numbers are saved to a PIK file that can be loaded into one or more of the wheeling systems in the Wheels menu.

Drawing Summary

When the Drawing Summary/Quick Pick command is selected, you are asked to enter the number of drawings to include in the summary. The default number of drawings that is displayed is the total number of drawings in the data base minus the Hot Number Cutoff setting. If there are 200 drawings in the database, and the Hot Number Cutoff is set to 10 drawings, then the default for the Drawing Summary will be 190 drawings.

It is necessary to subtract the Hot Number cutoff from the total drawings because it is not possible to tell if a number is Hot or Cold for the first few drawings in the database.

Enter the number of drawings to include in the summary. The minimum number allowed is 11 drawings. Press the ENTER key or click on the OK button to accept the number. Click on the Cancel button to cancel the drawing summary.

There are many complex calculations necessary for each drawing. If you run the summary for hundreds of drawings, it could take several minutes to complete. A message box is displayed that shows the progress of the calculations. When all the drawings that you specified have been analyzed, the Drawing Summary dialog box is displayed.

The drawing dates are displayed in the far left vertical column. The statistics for each drawing are displayed in the columns to the right of each date. Use the vertical scroll bar to view other drawings that are not displayed.

Averages and percentages for each category are displayed at the bottom of each column. These values are used when you select the Quick Pick option to pick your numbers.

Click on the Print button in the Drawing Summary dialog box to print the Drawing Summary. The Print Options dialog box is displayed. Enter the number of copies to print in the Copies box. Click on the OK button to start printing, or click on the Cancel button to cancel printing.

Click on the OK button in the Drawing Summary dialog box when you are finished viewing or printing the Drawing Summary.

Quick Pick

When you click on the Quick Pick button in the Drawing Summary dialog box, the Quick Pick dialog box appears. Enter the total number of numbers that you want picked in the Total Numbers box and press the ENTER key. For example, if you are going to play a wheeling system that has 18 numbers and 42 tickets, you should enter the number 18 in the Total Numbers box.

The area to the right of the Total Numbers box is filled with the numbers as they are picked in the categories in the lower part of the dialog box. The numbers are displayed in the order that they are picked. This is the same order that is used when the numbers are substituted into the wheeling systems.

When the insertion bar moves to the 1 to 12 range box and the 13 to 31 range box, the program automatically calculates how many numbers to pick in these ranges, based on statistics from the Drawing Summary. You can press the ENTER key to accept these values, or type in other values.

You cannot enter a value in the 32 and up range box, since this value is automatically calculated by subtracting the value entered for the 1 to 12 range and the 13 to 31 range from the Total Numbers value.

The area to the right of the three range boxes is filled with numbers that fall within these ranges as they are picked in the categories in the lower part of the dialog box.

If you have specific numbers that you want to wheel, enter them in the Favorite numbers box. For example, after analyzing the Skip and Hit Chart, Sequence Chart, Repeating Pairs Chart and Repeating Triples Chart, you may determine that certain numbers have a high probability of hitting next.

To be sure that these numbers are in the numbers that you wheel, enter them in the Favorite numbers box. Each number that you enter should be separated by a space.

When you press the ENTER key, the numbers are displayed to the right of the corresponding range categories above, and to the right of the corresponding statistical categories below. They are also displayed to the right of the Total Numbers box.

When the insertion bar moves to the Hot numbers, Last Draw numbers, Cold numbers and Due numbers boxes, the program automatically calculates how many numbers to pick for each of these categories. You can press the ENTER key to accept the values displayed, or type in other values.

After you press the ENTER key for each category, the program picks the specified amount of numbers from that category and displays them to the right of the number box.

For example, if a 6 is displayed for Hot numbers, the program picks 6 numbers that are currently Hot and displays them to the right of the Hot numbers box.

If there are not 6 numbers that are currently Hot, then the program will only display the number of Hot numbers that it finds. The value displayed in the Hot numbers box will automatically be decreased to the number of Hot numbers that the program finds.

The numbers that are picked for each category must meet the range requirements specified above. For example, suppose that you specify that you want two numbers in the 1 to 12 range. If you entered 3 numbers in the Favorite numbers box that were in the 1 to 12 range, the program would only accept 2 of the 3 numbers that you entered.

You also have the option of letting the program randomly pick your numbers. Enter the number of random numbers in the Random numbers box. The numbers are picked at random from all categories and displayed to the right of the box. The random numbers that are picked must also meet the range requirements specified above.

Each time a number is picked in one of the lower categories, the Remaining picks box at the bottom of the dialog box is decreased by one. When the value of the Remaining picks box is zero, all the numbers have been picked.

If you get down to the Random numbers box and find that the Remaining picks value is not zero, this means that the program could not find enough numbers in one or more of the above categories.

At this point you may want the program to randomly pick the remaining picks. To do this, enter the number of remaining picks in the Random numbers box.

Another alternative would be to press the ENTER key to go through the other categories again. For example, lets say that you have one remaining pick when you get down to the Random numbers box.

If you press the ENTER key one time, the insertion bar moves back to the Hot numbers box. If the program had previously picked 10 Hot numbers, you could increase the number of Hot numbers to 11. If the program finds another Hot number, the Remaining picks box should display the number zero.

When the value for Remaining Picks is zero, you cannot make any further changes. The Save button in the Quick Pick dialog box has the focus. Press the ENTER key or click on the Save button to display the Save Pick File dialog box

A list of Quick Pick files that were previously saved is displayed in the Files list box. Each Quick Pick file has an extension of ".PIK." There are three ways to save your Quick Pick numbers to an existing filename.

1. Double click the filename in the Files list box.
2. Highlight the filename in the Files list box, and press the ENTER key or click on the OK button.
3. Type the name of the file in the Filename text box, and press the ENTER key or click on the OK button.

When you save to an existing file, the Quick Pick numbers that were originally saved in the file are replaced with the new Quick Pick numbers.

To save your numbers to a new filename, enter the name of the file in the Filename box. It is not necessary to add the ".PIK" extension to the name. The program will automatically add the extension to the name after you press the ENTER key or click on the OK button.

After you save the file, the focus returns to the Print button in the Quick Pick dialog box. To print your Quick Pick numbers, press the ENTER key or click on the Print button. The Print Options dialog box is displayed. Enter the number of copies that you want printed in the Copies box. Click on the OK button to start printing, or click on the Cancel button to cancel printing.

Click on the Clear button in the Quick Pick dialog box if you want to pick another set of Quick Pick numbers. The previous set of Quick Pick numbers is cleared and the insertion bar returns to the Total Numbers box. Repeat the previous instructions to pick a new set of numbers. If you save more than one Quick Pick file, be sure to use a unique filename for each set of picks.

Click on the OK button when you have finished picking your numbers. The Quick Pick dialog box disappears and the Drawing Summary dialog box is displayed again. Click on the OK button in the Drawing Summary dialog box when you are finished viewing or printing the Drawing Summary.

After you have saved your Quick Pick numbers, the next logical step is to Play those numbers in one or more of the 24 wheeling systems in the Wheels menu. Refer to the next section for information on the Wheels menu.

Wheels Menu

Choose the Wheels menu command to play or edit one or more Wheeling systems.

Four Full Wheeling Systems are provided for Pick 5 and Pick 6 games. Twenty Abbreviated Wheeling Systems are provided for Pick 5, 6 and 7 games. You can use the Edit command in the Wheels menu to enter other Abbreviated wheeling systems.

The wheeling systems use the Quick Pick files that contain the numbers that you want to play. The numbers in the Pick file are substituted with the numbers in the wheeling system to generate game tickets. The tickets are saved to a Game file and printed so that you can fill out your bet slips.

Use the Check For Winning Games option in the Drawings menu each week to check the tickets in your game file(s) against the officially drawn numbers.

To illustrate how wheeling systems work, we will use one of the wheeling systems provided for Pick 6 games. This wheeling system uses 10 numbers and generates 15 tickets. The system guarantees that if the 6 numbers drawn are in the 10 numbers you play, you will win at least a second prize (5 out of 6).

If you choose the Edit Command from the Wheels menu, and then select the system that reads 10 numbers, 15 games 5/6, you will see 15 tickets with the following numbers:

```
01. 01 02 03 04 05 06
02. 01 02 03 07 08 09
03. 01 02 04 06 09 10
04. 01 02 06 07 08 10
05. 01 03 04 05 07 10
06. 01 03 04 08 09 10
07. 01 05 06 07 08 09
08. 01 05 06 08 09 10
09. 02 03 04 05 07 08
10. 02 03 05 06 08 10
11. 02 03 05 07 09 10
12. 02 04 05 07 08 09
13. 02 04 05 07 08 10
14. 03 04 06 07 08 09
15. 03 04 06 07 09 10
```

Notice that none of the numbers in the system are greater than 10. This is because the numbers displayed are not the actual numbers that you are going to play. The numbers displayed are the order of substitution for the numbers in the Quick Pick file.

To illustrate how this works, let's say that the following 10 numbers are picked in the Quick Pick option, and saved to a Quick Pick file in the following order: 12 15 20 23 28 30 34 39 43 49.

To play these numbers in the wheeling system that we just looked at, you would choose Play command from the Wheels menu. Next you would choose Abbreviated, and then the system 10 numbers, 15 games 5/6.

You would then select the Quick Pick file with the 10 numbers that you just saved. The Quick Pick numbers in the file are substituted into the wheeling system in the order shown above.

For example, the number 12 from the Quick Pick file is substituted for the number 1 in the original system because the number 12 is the first number in the file. The Number 15 is substituted for the number 2, etc.

When all the numbers are substituted, the resulting tickets would like the following:

```
01. 12 15 20 23 28 30
02. 12 15 20 34 29 43
03. 12 15 23 30 43 49
04. 12 15 30 34 39 49
05. 12 20 23 28 34 49
06. 12 20 23 39 43 49
07. 12 28 30 34 39 43
08. 12 28 30 39 43 49
09. 15 20 23 28 34 39
10. 15 20 28 30 39 49
11. 15 20 28 34 43 49
12. 15 23 28 34 39 43
13. 15 23 28 34 39 49
14. 20 23 30 34 39 43
15. 20 23 30 34 43 49
```

These tickets would then be saved to a Game file and later compared to the official numbers that are drawn in the next drawing. They would also be printed so that you could fill out your bet slips.

Play (Wheels)

When you choose the Play command from the Wheels menu, you can select to play a Full wheeling system or an Abbreviated wheeling system.

Full Systems

There are 4 Full systems included for Pick 5 and Pick 6 games. A Full system mathematically covers every possible combination of the numbers wheeled. For example, one of the Pick 6 Full systems has 28 combinations of 6 numbers to cover every possible combination of the 8 numbers played.

An advantage to using a Full system is the number of winning hits received when just a few of the numbers wheeled match. In an 8 number Full system, a 5 number match will produce winning prizes on every ticket. Another advantage is that you are guaranteed to have a jackpot win when the officially drawn numbers are in the group of numbers that you wheel.

A disadvantage of a Full wheeling system is the geometrical increase in the number of tickets that you must purchase to cover a larger group of numbers to wheel. An 18 number Full wheeling system would require more than 18,000 bets to cover every possible combination of 6 numbers with the 18 numbers you play.

When you choose the Full command from the Wheels menu, and then choose one of the 4 Full systems, the Open Quick Pick File dialog box is displayed.

You can select a Quick Pick File to wheel by using one of the following methods:

1. Double click on the filename in the Files list box.
2. Click on the filename in the Files list box, and then click on the OK button or press the ENTER key.
3. Type the name of the file in the Filename box, and then click on the OK button or press the ENTER key.

After the Quick Pick file is loaded and the numbers in the file have been substituted into the wheeling system, the Full Wheeling System dialog box is displayed. The resulting tickets are displayed in the ticket list box.

Use the vertical scroll bar to view tickets that are not displayed. When the tickets are first displayed, they are displayed in sorted order from the lowest to the highest number. It is easier to fill out your bet slips if the tickets are in sorted order.

Sorted order is not the same order as was in the original number system before the Quick Pick numbers were substituted. If you would prefer to see the tickets in the order of the original numbers, click on the Unsorted option button. The Win Guarantee, Numbers Played and Quick Pick File are displayed at the bottom of the dialog box.

Click on the Save button to save the ticket information to a Game file. The Game file is used by the Check For Winning Games command in the Drawings menu to find out how many winning tickets you have after the official numbers have been drawn.

When you click on the Save button, the Save Game File dialog box is displayed. You can select a previously saved Game file using one of the following 3 methods:

1. Double click on the filename in the Files list box.
2. Click on the filename in the Files list box, and then click on the OK button or press the ENTER key.
3. Type the name of the file in the Filename box, and then click on the OK button or press the ENTER key.

When you save to a previously saved Game file, the tickets that were

originally in the file are replaced by the new game tickets. To save the Game file under a new name, type the name of the file in the Filename box, and click on the OK button or press the ENTER key. It is not necessary to add the extension "GAM" to the filename.

After the Game file has been saved, the focus is on the Print button in the Full Wheeling System dialog box. When you press the ENTER key or click on the Print button, the Print Options dialog box is displayed. Enter the number of copies to print in the Copies box. Click on the OK button to start printing, or click on Cancel to cancel printing.

Click on the OK button in the Full Wheeling System dialog box when you have finished viewing or printing the tickets.

Abbreviated Systems

Twenty Abbreviated wheeling systems are included for Pick 5, 6 and 7 games. The biggest advantage of an Abbreviated system is with the much larger group of numbers you can cover at a reasonable cost, while still maintaining guaranteed wins when the officially drawn numbers appear in your much larger group of numbers wheeled.

When you choose the Abbreviated command from the Wheels menu, a list of 20 systems is displayed. Each system name tells how many numbers are played in the wheel, the number of games, and the prize guarantee.

A prize guarantee of 4/6 means that if 6 of the officially drawn numbers appear in your larger group of wheeled numbers, then you are guaranteed a match of 4 numbers.

When you choose one of the 20 Abbreviated wheeling systems, the Open Quick Pick File dialog box is displayed. You can select a Quick Pick File to wheel by using one of the following methods:

1. Double click on the filename in the Files list box.
2. Click on the filename in the Files list box, and then click on the OK button or press the ENTER key.
3. Type the name of the file in the Filename box, and then click on the OK button or press the ENTER key.

After the Quick Pick file is loaded and the numbers in the file have been substituted into the wheeling system, the Abbreviated Wheeling System dialog box is displayed. The resulting tickets are displayed in the ticket list box.

Use the vertical scroll bar to view tickets that are not displayed. When the tickets are first displayed, they are displayed in sorted order from the lowest number to the highest number. It is easier to fill out your bet slips if the tickets are in sorted order.

Sorted order is not the same order as was in the original number system before the Quick Pick numbers were substituted. If you would prefer to see the tickets in the order of the original numbers, click on the Unsorted option button. The Win Guarantee, Numbers Played and Quick Pick File are displayed at the bottom of the dialog box.

Click on the Save button to save the ticket information to a Game file. The Game file is used by the Check For Winning Games command in the Drawings menu to find out how many winning tickets you have after the official numbers have been drawn.

When you click on the Save button, the Save Game File dialog box is displayed. You can select a previously saved Game file using one of the following 3 methods:

1. Double click on the filename in the Files list box.
2. Click on the filename in the Files list box, and then click on the OK button or press the ENTER key.
3. Type the name of the file in the Filename box, and then click on the OK button or press the ENTER key.

When you save to a previously saved Game file, the tickets that were originally in the file are replaced by the new game tickets. To save the Game file under a new name, type the name of the file in the Filename box, and click on the OK button or press the ENTER key. It is not necessary to add the extension "GAM" to the filename.

After the Game file has been saved, the focus is on the Print button in the Abbreviated Wheeling System dialog box. When you press the ENTER key or click on the Print button, the Print Options dialog box is displayed. Enter the number of copies to print in the Copies box. Click on the OK button to start printing, or click on Cancel to cancel printing.

Click on the OK button in the Abbreviated Wheeling System dialog box when you have finished viewing or printing the tickets.

Edit (Wheels)

Choose the Edit command from the Wheels menu to edit or replace any of the 20 Abbreviated wheeling systems. DO NOT attempt to replace a wheeling system unless you use a book on wheeling systems. One book that we highly recommend is "The Only Way To Win At Lotto" by Robert Serotic.

When you choose one of the 20 Abbreviated wheeling systems to edit, the Edit Wheel dialog box is displayed. The games for the system you chose are displayed in the Games list box. Use the horizontal scroll bar to view games that are not currently displayed.

Click on the Print button to print all the games in the wheeling system. The Print Options dialog box is displayed. Enter the number of copies to print in the Copies box. Click on the OK button to start printing, or click on the Cancel button to cancel printing.

If you want to edit an existing system, you can only change the numbers in each game. You cannot change the number of numbers in the system, the number of games, or the prize guarantee.

To edit a game, click on the game number that you want to edit in the Games list box. The numbers in the game then appear at the bottom of the Edit Wheel dialog box in the Game numbers boxes.

To change one or more of the numbers in a game, click on the appropriate Game numbers box and enter the change. Press the ENTER or TAB keys to go through all the boxes for that game. Any changes made now appear in the Games list box.

To completely replace a wheeling system, click on the New button in the Edit Wheel dialog box. The Games list box is cleared of all games and the insertion bar moves to the Numbers box. Enter the number of numbers that will be played in the system.

In the Games box enter the total number of games in the new system. Enter the number of numbers that are guaranteed to match in the Guarantee box. Enter the number of correct numbers needed for the prize in the #'s are correct box.

The insertion bar then moves to the first Game numbers box. The game number is automatically displayed in the Game box to the left. Enter the numbers for that game.

When all the numbers have been entered, the game appears in the Games list box. The insertion bar returns to the first Game numbers box and the Game counter is increased by one.

When you have entered all the games, the focus is on the OK button in the Edit Wheel dialog box. Press the ENTER key or click on OK. You are then asked if you want to save your changes.

Click on the Yes button to save the changes, or click on the No button to cancel all changes. When you save a new system, the new system name is automatically added to the Abbreviated wheeling system menu.

Help Menu

Index

Use this command to display the opening screen of Help. The Index provides an alphabetical list of all the topics in the Help file. You access Help topics by clicking on the underlined and/or green colored items in the list.

From the Index, you can jump to step-by-step instructions for using Windows Lotto and various types of reference information. Once you open Help, you can click the Contents button in the Help window whenever you want to return to the Index.

Context Help

Context help means that you can access Help for specific Windows Lotto features without having to quit that feature or search through the index. There are two kinds of context help; Active Help and Menu Help.

Active Help

Press the F1 key to activate Active Help. Active Help relates to the dialog box or control that currently has focus. For example, if an option button has the focus, pressing F1 invokes a topic to be displayed that explains the functioning of that option button.

Menu Help

For help with specific menu items, choose Context Help from the Help menu or press SHIFT F1. When you choose Context Help, the mouse pointer changes to a box pointer. Normal mouse and keyboard functions are now suspended. For Help on a menu item, choose the menu item with the box pointer. A Help window is displayed that gives an explanation of the menu item.

Using Help

Choose Using Help to learn how to use the Window's Help system.

Documentation

Choose documentation to view or print the Windows Lotto User's manual.

License Terms

Choose License Terms to view or print the Windows Lotto License agreement and warranty information.

Registration

Choose Information to view or print the Windows Lotto registration benefits and requirements. Choose Form to print a Windows Lotto registration form.

Related Products

Choose Information to view or print detailed information about other lotto related products from Data Solutions. Registered users receive a discount on all these products. Choose Order Form to print an order form.

Release Notes

Choose Release Notes to view or print the README.1ST file. This file contains Windows Lotto hardware and software requirements and installation information.

About Windows Lotto

Choose About Windows Lotto from the Help menu to display a dialog box with information concerning Windows Lotto. Click on the OK button to close the dialog box.
