Make check payable to Paul Norris and send to 1438 Third Ave. Suite 22C. New York New York. 10028. Please indicate prefered diskette size.

The Main idea of this program is to operate from the Window's start-up group, in this manner Vocabulator is displayed above all other applications, without the need to start it manually.

Another use is for it to piggy-back another application, such as your word processor, in this manner every time you click on the vocabulator icon the selected program will load with your daily word displayed in the lower portion of the screen. If you choose to permanently have vocabulator« piggy-back a particular application it would be best to delete the icon for that application and just use vocabulator's icon to start it.

The vocabulator« program displays a new word each day. Starting the program multiple times in one day will not increment to the next word. Only restarting on a new day will display a new word. Vocabulator« can also run as a stand alone application.

MENU INSTRUCTIONS

FLOAT - This button allows vocabulator« to float above all other applications including Program Manager. By deffault it loads this way. Short-cut key is alt-f.

SINK - This button turns off the float button. Short-cut key is alt-k.
