Guardian Angel
v2.0
January 1993

Guardian Angel is a MS Windows utility that protects you from data loss in
the event of a system crash. It does this by monitoring system resources
and available RAM, and warning you when you get dangerously low. This
enables you to save your work before the crash.

System RAM and resource thresholds can be modified by editing WIN.INI and
changing the appropriate parameters in the [Guardian Angel] section.
Changing these values is not recommended unless you are skilled in Windows
system management.

For continous protection, Guardian Angel should be executed during Windows
startup. This can be done by copying Guardian.EXE into the Windows
subdirectory and placing "Guardian.exe" in the "Load= " line of Win.INI, or
by placing its icon in the Startup group (Windows 3.1 and above).

Registering Guardian Angel

Guardian Angel is copyrighted software and all rights are reserved by the
author. You are free to evaluate the product for 30 days to determine its
suitability to your needs. Use beyond 30 days requires registration.

To register, please send your name, address, and $10 to the address below.
In return, you will be sent a registered version of the software.
you may use the attached form if you like.

  Mail to:
