

# Right to Left

The R2L program allows you to type Hebrew from right to left. When the program is started, it is an icon. The program is activated by typing <shift><ctrl>h. When this key combination is typed, the program is activated. Type in the Hebrew to insert. Then, chose "File" (<alt>f) and Done (<enter>). The R2L utility inserts the text into your word processor.

N.B. The program does not switch fonts! You need to select Shebrew in your word processor before activating this utility.
