QuickShow Light for Windows

_____

To install QuickShow Light for Windows:

1. If you have received this software in an archive, such as a ZIP
file, unpack it into a blank, formatted floppy disk. Your floppy
disk must have at least 720 kilobytes of free space. This will be
your installation disk.

2. Place your installation disk in a floppy drive of your computer.

3. Select Run from the Windows Program Manager File menu. Enter
A:SETUP or B:SETUP in the Run dialog and click on OK. The setup
procedure is automatic.

_____

QuickShow Light for Windows is a quick and easy to use Windows
multimedia slide show application. It supports files in the
following formats: MacPaint, IMG, PCX, GIF, TIFF, IFF/LBM, PIC,
TGA, BMP, DIB, RLE, MSP, CUT, ART, JPG, Kodak Photo-CD, RAS, HRZ
and WordPerfect Graphics bitmapped WPG.

QuickShow Light for Windows should run on any system which supports
Windows 3.1 or better. This software requires a minimum of four
megabytes of memory to run reliably, with eight megabytes preferable.
Larger images may require more memory still.

QuickShow Light for Windows is a product of Alchemy Mindworks Inc.
It's being distributed as bookware, which is like shareware but
still less expensive. Complete details are included with this
package.

Thanks for trying out QuickShow Light for Windows.
