Thank you very much for evaluating Words & Terms.

There are so many uses for this program it's hard to list them all.
Please read the Introduction and Uses for Words & Terms in Help and
then use the Sample file included. Help explains all the features of
Words & Terms, please spend a few minutes reading it.

I'm sure you'll be impressed and I'm equally sure that you'll
find many uses for the program, just like the many other users.
I have not crippled the main program in any way, however, there
are three thing that I've disabled.

CREATE - The ability to create any number of files
OPEN   - The ability to open all these files
DELETE - The ability to delete any of the files

As it is, you can use the sample file, experiment with it, if you
want to use it for a particular subject, simply delete all the words
and put in your own. Don't forget to pack the data base after
deleting words, this will remove all the empty spaces left over from
the deletions and will make the data file smaller.

To Install:
1. Create a C:\WORDS directory (or any directory you prefer).
2. Move the WORDS.ZIP file there and unzip it with PKUNZIP.
3. Make sure that VBRUN100.DLL is in your PATH (the Windows directory is good)
4. RUN WORDS.EXE from File Manager or Program Manager or Norton Desktop
(or whatever program-launching method you prefer).

I hope that you find the program so appealing and useful that you
don't mind buying it. You'll find the Order Form under the Help Menu.
Simply fill it out, print it and send it.

Again, thank you very much!
