* Welcome to the world of role playing games! *

* This is the Dungeon Master Assistant version 2.0 *

If you're a dungeon master you know how long and annoying it can be to roll a new pc, specially when you have an entire party to roll! You have to pass throug the many pages of the Dungeon master's guide and the player's handbook just to make sure you have all the good numbers at the right places, and i'm not talking about the time it would take to make a spell book for your spellcasters!

Well...no more! Now you can roll your party in 15 minutes and begin to PLAY !

This is the version 2.0 of DMA, it's an advanced dungeons and dragons Dungeon master's assistant. To use this program, you must be familiar with the role playing game "Advanced dungeons and dragons".

Hardware Requirement to run the standard version:

- An IBM-PC or compatible computer, 80386 or higher.
- Hard disk with 5 megs free.
- A mouse(you'll be sorry if you dont have one!).
- 2.5 Megabytes of FREE RAM memory under windows (this usually means that you need a computer with 4 meg. RAM or a big Swap file!). I recommend that you give windows at least 4 megs of FREE MEMORY to run DMA, some options just wont run without enough memory.

Hints:

- Be sure to have your config.sys FILES parameter set to 60 or more.

This program is shareware. This program is NOT free. If you like the program and continue to use it after 30 days, you MUST register.

See the file REGISTER.TXT for more information on registering.
